

## A C K N O W L E D G E M E N T.

I feel proud to express my sincere gratitude to my teacher and guide Professor S.N.Sen, Head of the Department of Physics, North Bengal University, for his valuable guidance, suggestions and inspirations throughout this work. In fact, he was not simply my research supervisor; at the same time he was a father-like guardian to me. Whenever I have encountered any problem, be it academic or personal, I have always received his whole-hearted co-operation and assistance towards its solution. Above all, in course of choosing a research problem and proceeding with it, the liberty I was endowed from his part created a mental freedom which, I think, is very much necessary in pursuing a research work.

It is a life-long pleasure of mine that I had the privilege to work with a person like Shri S.K.Ghosal, Lecturer, Department of Physics, North Bengal University, during this work. I must admit that his valuable and ingenious suggestions in many steps have played an important role for the work to take this shape. I wish to remain ever grateful to him for his various assistances in the laboratory.

It is my another pleasure to thank Professor K.G.Emelius, Editor, Int. J. Electronics, for his valuable suggestions, helps and comments on some of the investigations through correspondence.

Next I wish to thank the authority of North Bengal University for giving me the scope to pursue research work here and other necessary facilities whenever it was necessary. It is my another duty to thank the Council of Scientific and Industrial Research for providing me first with a Junior Research Fellowship and then with a Senior Fellowship. It is my pleasant task to thank the typists Shri S.Choudhury and Shri J. Sarkar for their untiring performances during typing the manuscripts. I also wish to thank Shri N. Ghosh for his doing necessary drawing works of the present thesis. I am obliged to Shri S.Saha for his doing all the glass blowing jobs so skillfully and Shri B. Nag and Shri G.Basak for their performing the machinery works for the present work. Besides, I am thankful to all the colleagues and other staffs of the Department of Physics, North Bengal University for their ready and helpful co-operations at all times. Lastly I wish to thank my wife, Aparna, who is presently a Junior Research Fellow in the Department of Physics, for her giving me constant inspiration throughout this work as well as helping me sometimes in the laboratory.
