

CONTENTS

<u>SUBJECTS</u>	<u>PAGE</u>
ABSTRACT	.. (i)
CHAPTER - ONE	
GENERAL INTRODUCTION	
1.1. General discussions on Phase Transitions	.. 1
1.2. Thermodynamic interpretations (Macroscopic view)	.. 5
1.3. Microscopic description	.. 8
1.4. Model Hamiltonian	.. 15
1.5. A short review of earlier works on H-bonded ferroelectrics and anti-ferroelectrics	.. 18
REFERENCES	.. 22
CHAPTER - TWO	
STUDY OF PHASE TRANSITIONS IN THE HYDROGEN-BONDED (A) PbHfO_4 -TYPE CRYSTALS AND (B) ROCHELLE SALT,	
A. PbHfO_4 -type crystals	
2.A.1. Introduction	.. 25
2.A.2. Model Hamiltonian	.. 29
2.A.3. Static properties	.. 30

2.A.4.	Dynamic properties	..	34
2.A.5.	Electrical susceptibility and Curie-Weiss constant	..	39
2.A.6.	Results and discussion	..	40
2.A.7.	Summary and conclusion	..	45
	REFERENCES		47

B. Rochelle Salt

2.B.1.	Extension of the FLCM model for the study of phase transition in Rochelle salt ..		50
2.B.2.	Theory	..	52
2.B.3.	Dynamic properties	..	54
2.B.4.	Correlation functions and internal energy	..	56
2.B.5.	Curie-Weiss constants	..	59
2.B.6.	Results and discussion	..	59
2.B.7.	Conclusion	..	61
	REFERENCES	..	63

CHAPTER - THREE

A. APPLICATION OF PSEUDO-SPIN-LATTICE COUPLED MODE MODEL FOR THE STUDY OF FERROELECTRIC PHASE TRANSITIONS IN KDP-TYPE CRYSTALS

3.A.1.	Introduction	..	65
3.A.2.	Green's function method and the solution	..	71

3.A.3.	Dynamic properties	..	75
3.A.4.	Electrical susceptibility and internal energy	..	78
3.A.5.	Curie-temperature	..	80
3.A.6.	Curie-Weiss constant	..	81
3.A.7.	Specific heat	..	83
3.A.8.	Results and discussion	..	85
3.A.9.	Conclusion	..	89
	REFERENCES	..	91
B.	STUDY OF TRANSVERSE ELECTRICAL SUSCEPTIBILITIES IN KDP-TYPE CRYSTALS		
3.B.1.	Introduction	..	94
3.B.2.	Calculation	..	95
3.B.3.	Results and discussion	..	99
3.B.4.	Conclusion	..	102
	REFERENCES	..	103
CHAPTER - FOUR			
APPLICATION OF PSEUDO-SPIN-LATTICE- COUPLED-MODE MODEL FOR THE STUDY OF ANTI-FERROELECTRIC PHASE TRANSITIONS IN THE ADP-TYPE CRYSTALS			
4.1.	Introduction	..	105
4.2.	Model Hamiltonian	..	109
4.3.	Calculation of static susceptibility	..	112

4.4.	Dynamic behaviour(Energy spectrum)	..	115
4.5.	Calculation of susceptibility from dynamic Green's function	..	123
4.6.	Results and discussion	..	125
4.7.	Conclusion	..	128
	REFERENCES	..	130

CHAPTER - FIVE

STUDY OF PHASE TRANSITIONS IN SnCl₂·2H₂O AND ITS DEUTERATED FORMS

5.1.	Introduction	..	133
5.2.	Model Hamiltonian	..	139
5.3.	Calculation of transition temperature and dielectric constants	..	143
5.4.	Results and discussion	..	151
5.5.	Conclusion	..	155
	REFERENCES	..	158

CHAPTER - SIX

STUDY OF PHASE TRANSITIONS IN AMMONIUM HYDROGEN DI-CHLOROACETATE NH₄H(ClCH₂COO)₂ AND ITS DEUTERATED FORM ND₄D(ClCH₂COO)₂

6.1.	Introduction	..	161
6.2.	Theoretical calculation	..	165
6.3.	Results and discussion	..	167
	REFERENCES	..	170

CHAPTER - SEVEN

PHENOMENOLOGICAL EXPLANATION OF THE ANOMALOUS DIELECTRIC BEHAVIOUR OF ALUMS WITH PSEUDO-SPIN-LATTICE- COUPLED-MODE MODEL

7.1.	Introduction	..	171
7.2.	The model	..	177
7.3.	Theoretical calculations		
	A) Electrical susceptibility (χ)	..	179
	B) Transition temperature (T_c)	..	185
	C) Curie-Weiss constant (C)	..	185
7.4.	Results and discussion	..	186
7.5.	Conclusion	..	190
	REFERENCES	..	192

CHAPTER - EIGHT

A PROBABLE PHENOMENOLOGICAL EXPLANATION OF PHASE TRANSITION IN COPPER FORMATE TETRAHYDRATE WITH MODIFIED TRANSVERSE ISING MODEL (GREEN'S FUNCTION THEORY)

8.1.	Introduction	..	194
8.2.	Discussion of the model	..	202
8.3.	Theoretical calculations	..	205
8.4.	Results and discussion	..	211
	REFERENCES	..	214

CHAPTER - NINE

**AN EXTENSION OF PSEUDO-SPIN MODEL TO
STUDY THE PRESSURE DEPENDENCES ON
DIELECTRIC CONSTANTS OF SQUARIC ACID
AND ITS DEUTERATED FORM**

9.1. Introduction	**	216
9.2. The pseudo-spin model and theory	**	221
9.3. Results and discussion	**	229
REFERENCES	**	235
LIST OF PUBLICATIONS	**	239
