

TABLE OF CONTENTS

	Page No.
Preface	i
Abstract	ii
Acknowledgement	v
List of Tables	X
List of Figures	xii
List of Abbreviation	xiv
Chapter 1 INTRODUCTION	
1.1 Background	1
1.2 Key areas identified for research	1
1.3 Objectives	3
Chapter 2 REVIEW OF LITERATURE	
2.1 Overview on Fish Nutrition	4
2.2 Food and feeding habits of fish	5
2.3 Digestive Enzymes Patterns	5
2.4 Feeding strategies	7
2.5 Nutritional Requirements for fish	8
2.6 Feeding and Water quality	10
2.7 Performance measures	11
Chapter 3 MATERIALS & METHODS	
3.1 Site of the study, Study period, Study animal	13
3.2 Section I: A preliminary study on size selection of fingerlings and standardization of the feeding strategies and management for culture <i>N. hexagonolepis</i> fingerlings	17
3.3 Section II: Objective 1 - Determination of Optimum Protein requirement for fingerlings of <i>N. hexagonolepis</i> fingerlings	22
3.4 Section III: Objective 2: To study growth performance (live weight gain, specific growth, protein efficiency ratio, feed conversion ratio, etc) of the Mahseer fingerlings <i>N. hexagonolepis</i> , in response to experimental diets	24
3.5 Analytical methods for Proximate Composition analysis and Growth Performance study	31
3.6 Section IV: Objective 3: To analyze the pattern of digestive enzymes (protease, lipase and amylase) in the Mahseer fingerlings <i>N. hexagonolepis</i> , during culture operation	35
3.7 Section V: Objective 4 - To investigate the physico-chemical parameters in the water during culture operation of <i>N. hexagonolepis</i>	37
3.8 Statistical Analysis	41

Chapter 4 RESULTS	
4.1 Section I - Findings of preliminary study on size selection of fingerlings and standardization of the feeding strategies and management for the culture of <i>N. hexagonolepis</i> fingerlings	42
4.2 Section II: Objective 1 - Determination of Optimum Protein requirement for fingerlings of <i>N. hexagonolepis</i> fingerlings	50
4.3 Section III: Objective 2: To study growth performance (live weight gain, specific growth, protein efficiency ratio, feed conversion ratio, etc) of the Mahseer fingerlings <i>N. hexagonolepis</i> , in response to experimental diets	53
4.4 Section IV: Objective 3 - To analyze the pattern of digestive enzymes (protease, lipase and amylase) in the Mahseer fingerlings <i>N. hexagonolepis</i> , during culture operation	62
4.5 Section V: Objective 4 - To investigate the physico-chemical parameters in the water during culture operation of <i>N. hexagonolepis</i>	70
Chapter 5 DISCUSSION	
5.1 Size selection of fingerlings and standardization of the feeding strategies and management for the culture of <i>N. hexagonolepis</i> fingerlings	99
5.2 Growth Performance of <i>N. hexagonolepis</i> fingerlings in response to varying macronutrients	102
5.3 Digestive enzyme patterns of <i>N. hexagonolepis</i> fingerlings in response to varying macronutrients	105
5.4 Physico-Chemical Parameters of Water in response to different diets fed to <i>N. hexagonolepis</i>	109
Chapter 6 CONCLUSION	114
Chapter 7 SUMMARY	115
BIBLIOGRAPHY	118
INDEX	150
APPENDICES	
Appendix A: List of Publication	151
Appendix B: Seminar and conferences	152
