

I

CONTENTS

CHAPTER I

	Page
1.0. Introduction	1
(A) 1.1. Debye theory of dielectric polarization and relaxation	2
1.2. Derivation of Debye equation from a different concept.	5
1.3. Kauzmann's theory of dielectric relaxation	7
1.4. Relaxation time and its relation with microscopic and macroscopic properties	10
1.5. Cole-Cole distribution	12
1.6. Davidson and Cole skewed arc method	14
(B) 1.7. Dielectric constant, Dielectric loss, Relaxation time and Radio frequency conductivity of polar liquid	15
1.8. A brief review of the early work . . .	34
(a) Dielectric dispersion, absorption and some related studies in organic polar liquids.	34

II

	Page
(b) Electrical conductivity of organic dielectric liquids	51
1.9. Scope and object of the present work	59
Bibliography.	64

CHAPTER II

Experimental Set up.

2.0. Theory of measurement of radio frequency conductivity. . . .	74
2.1. Measurement of radio frequency resistance of the secondary tuning circuit and its theory	76
2.2. Apparatus used and their description	79
2.3. Radio frequency milliammeter	82
2.4. Stabilized power supply	82
2.5. Thermostat	86
2.6. Measurement of D.C. conductivity of liquid	89
2.7. Measurement of viscosity	90
2.8. Measurement of Refractive Index	91
2.9. Measurement of static dielectric constant of polar liquids	91

III

	Page
2.10. Purification of liquids	92
2.11. Dielectric cell	93
2.12. Washing and cleaning of the dielectric cell	94
2.13. Determination of activation energy for dipole rotation	94
2.14. Determination of activation energy for viscous flow	95
2.15. Determination of activation energy for conductivity	96
References	98

CHAPTER III

3.0. Radio frequency conductivity of some aliphatic alcohols at different temperatures	99
--	----

CHAPTER IV

4.0. On the activation energy of some polar solute in non-polar solvent	124
--	-----

CHAPTER V

5.0. Effect of ions diffusion from double layer capacitors on RF conduction in polar liquids..	136
---	-----

IV

CHAPTER VI

	Page
6.0. Effect of temperature on radio frequency conduction in glycerine and ethylene- glycol	152

CHAPTER VII

7.0. Relaxation time and thermodynamical para- meter of ethylene-glycol and glycerol . . .	167
---	-----

CHAPTER VIII

8.0. Conductivity, relaxation time and energy of activation for glycerol-water mixtures at radio frequency	181
--	-----

CHAPTER IX

9.0. Determination of free ion density and dielectric relaxation time of some normal primary alcohols in benzene solution by RF conductivity measurements	194
10.0. Summary of the Results of present work and conclusion	238
List of publications Appendix A	257
List of symbols Appendix B	259
(The Greek Alphabet)
