

CONTENTS

<u>CHAPTER I</u>	<u>PAGE</u>
General Introduction	1 - 21
1.1. What liquid crystals are	2
1.2. Molecular structure of thermotropic mesogens.	6
1.3. Crystal structures of thermotropic mesogens.	12
1.4. Application of liquid crystals.	14
1.5. Scope and aim of the work.	17
References.	18
 <u>CHAPTER II</u>	
X-ray diffraction studies on mesogenic substances: theoretical backgrounds and experimental techniques.	22 - 82
2.1.1. Classification of liquid crystals and their structures	23
2.1.2. Methods of identification of different liquid crystalline phases.	33
2.2.1. Theory of nematic liquid crystalline state.	43
2.2.2. Order parameter.	43
2.2.3. Molecular mean field theory of nematic liquid crystals	45
2.3. Theoretical background for X-ray diffraction work	55

2.3.1.	Orientational distribution functions and order parameters	57
2.3.2.	Pseudopotential	63
2.3.3.	Molecular parameters.	65
2.4.	Experimental techniques and data analysis.	66
2.4.1.	Conversion of optical density to X-ray intensity intensity.	70
2.4.2.	Linear scanning and location of peak positions.	71
2.4.3.	Circular scanning and to plot I (ψ) versus ψ curve	75
References.	76

CHAPTER III

X-ray diffraction studies on the mesophases of N-(4-n-butoxybenzylidene)-4'-n-

butylaniline (BBBA).	83-111
3.1. Introduction.	84
3.2. Experimental methods	85
3.3. Results and discussions	87
References	109

CHAPTER IV

X-ray diffraction studies on the nematogen anisylidene-p-aminophenylacetate (APAPA).

112-138	
4.1. Introduction.	113
4.2. Experimental methods	114
4.3. Results and discussions.	115
References	138

CHAPTER V

X-ray diffraction studies on the mesophases of Bis-(4,4'-n-octyloxybenzylidene)-1,4- phenylenediamine (OOBPD)		139 - 165
5.1.	Introduction	140
5.2.	Experimental methods	141
5.3.	Results and discussions.	142
References		165

CHAPTER VI

Determination of crystal structures by X-ray diffraction methods: theoretical backgrounds and experimental techniques.		166 - 228
6.1.	Principles of X-ray diffraction by crystals	167
6.2.1.	Intensity data collection	171
6.2.2.	Intensity data reduction	175
6.3.	Direct methods of phase determination.	182
6.3.1.	Unitary and normalised structure S factors	183
6.3.2.	Structure invariants and semin- variants.	184
6.3.3.	Some relations involving the magnitudes and the phases.	187
6.3.4.	Determination of individual phases, probabi- probability considerations.	191
6.3.5.	Phase relationships and probabilities used in MULTAN.	195

6.3.6.	Procedures in MULTAN.	203
6.3.7.	Refinement of the structure.	207
6.3.8.	Weighting functions	216
6.3.9.	Some results derived from the refined structure.	217
References.	224

CHAPTER VII

The crystal and molecular structure of
4'-n-pentyloxy-4-biphenylcarbonitrile
(500B).

7.1.	Introduction	230
7.2.	Experimental methods for crystal data collection	231
7.3.	Determination of trial structure.	232
7.4.	Refinement of the trial structure.	245
7.5.	Results and discussions.	248
References.	262

CHAPTER VIII

The crystal and molecular structure
of 4-cyanophenyl-4'-n-heptylbenzoate
(OPHB).

8.1.	Introduction.	265
8.2.	Experimental methods for crystal data collection	266

8.3.	Determination of trial structure.	266
8.4.	Refinement of the trial structure.	278
8.5.	Results and discussions	281
References	299

CHAPTER IX

Summary and conclusion.	300 - 309
References.	309
Appendix- A	310
Appendix- B	323
