Declaration	i
Certificate from the supervisor	ii
Dedicatory	iv
Acknowledgements	v
Abstract	vii
Preface	x
Contents	xiv
List of Figures	xviii
List of Tables	xix
List of Abbreviations	xx
Physical Constants	xxii
Astronomical Constants	xxiii
1 Introduction	1
1.1 Cosmic rays	2
1.1.1 Energy spectrum of cosmic rays	2
1.1.2 Origin of cosmic rays	4
1.2 Gamma-ray and neutrino astronomy	6
1.3 Objectives of the thesis	8
References	10
2 Current status of gamma-ray and neutrino astronomy concerning the origin of cosmic rays	12
2.1 Gamma-ray astronomy concerning cosmic-ray origin	14

2.1.1	Possible gamma-ray sources	14
2.1.2	Gamma-ray experiments	16
	Imaging Atmospheric Cherenkov Telescopes	16
	HAWC	17
	LHAASO	18
2.1.3	Observational results	18
2.2	Neutrino astronomy concerning cosmic-ray origin	19
2.2.1	Possible neutrino sources	19
2.2.2	Neutrino experiments	21
	AMANDA Detector	21
	IceCube Detector	21
	Pierre Auger Observatory	23
2.2.3	Observational results	23
	Diffuse Astrophysical neutrinos	23
	Neutrino point sources	23
2.3	Adopted particle acceleration models	24
2.3.1	Particle acceleration models	24
	(a) Polar Cap mechanism	25
	(b) Langmuir–Landau–Centrifugal–Drive (LLCD) mechanism	29
	(i) Langmuir waves generated in the magnetosphere of pulsars:	29
	(ii) Landau damping :	30
2.4	Photon splitting mechanism in super-strong magnetic fields	33
References		36
3	TeV-PeV energy neutrinos and gamma rays from pulsars and magnetars	44
3.1	Introduction	44
3.2	TeV neutrinos and gamma rays originated from pulsars	47
3.2.1	Few pulsars as potential source of TeV gamma rays	50
3.2.2	Pulsars as source of TeV neutrinos	52
3.2.3	Gamma rays and neutrinos from pulsars nebula	53
	(a) Magnetic trapping of pulsar-accelerated PeV ions in nebulae	53
	(b) Gamma rays and neutrinos from nebulae of young pulsars	54
3.3	PeV neutrinos and gamma rays from magnetars	55
3.3.1	Photon splitting process in the magnetosphere	55
3.3.2	Emission of PeV neutrinos and gamma rays	56
	(a) Photomeson production	56
	(b) Physical model and photomeson threshold	58
	(c) The ion/proton flux interact in radiative fields	59

(d) The neutrino and gamma-ray fluxes on earth	60
(e) The neutrino and gamma-ray energies	62
3.3.3 PeV neutrino and gamma-ray events in VHE ground-based experiments	62
(a) Detection of PeV neutrino events in IceCube	62
(b) Detection of PeV gamma rays in IceCube and HAWC	63
3.4 Conclusion	65
References	66
4 Diffuse flux of PeV neutrinos from active galactic nuclei	69
4.1 Introduction	69
4.2 LLCD mechanism	71
4.2.1 Proton and neutrino energies	73
4.2.2 Possible energy loss scenario by protons	74
4.3 Diffuse neutrino and gamma-ray fluxes	75
4.3.1 Luminosity-dependent density evolution (LDDE) model for $f(z, L_b)$	76
4.3.2 Luminosity-dependent density evolution (LDDE) model with photon index distribution: $f(z, L_b, \Gamma)$	80
4.3.3 Constraints on BL by the IceCube limit on measured neutrino flux	81
4.4 Conclusions	82
References	84
5 Diffuse PeV neutrino emission from an extended source - Sgr A*	87
5.1 Introduction	87
5.2 Acceleration of protons via LLCD mechanism in Sgr A*	90
5.3 PeV neutrino and accompanying γ -ray fluxes	93
5.3.1 Numerical results	96
5.4 Conclusions	97
References	99
6 Diffuse flux of PeV neutrinos from young extragalactic MSP	102
6.1 Introduction	102
6.2 Electron acceleration via LLCD	106
6.3 Diffuse neutrino and gamma-ray fluxes	110
6.4 Summary and conclusion	116
References	119

7 Summary and discussion
