Abstract	vii
Preface	x
Acknowledgments	xi
Glossary of acronyms	xii
Table of contents	xvi
List of figures	xxi
List of tables	xxxii
List of appendices	xxxiii
Chapter 1	1-25
Introduction	
1.1. Electron donor-acceptor (EDA) based systems	1
1.2. Characteristics of EDA-based systems	1
1.2.1. Chemosensor	2
1.2.2. Optical sensors	3
1.2.2.1. Colorimetric chemosensor	4
1.2.2.2. Fluorescent chemosensor	5
1.2.2.2.1. Principles for designing fluorescence chemosensors	6
1.2.2.2.3. Signalling mechanisms for chemosensor	8
1.2.2.2.3.1. Photoinduced electron transfer (PET) process	8
1.2.2.2.3.2. Intramolecular charge transfer (ICT) process	9
1.2.2.2.3.3. Quenching of fluorescence	10
1.2.2.2.3.4. Forster resonance energy transfer (FRET)	11
1.2.2.2.3.5. Excited-state intramolecular proton transfer (ESIPT)	12
1.2.2.2.3.6. Excimer formation	13
1.2.2.2.3.7. Aggregation-induced emission (AIE)	14
1.2.2.4. Mode of operations of different chemosensors	14
1.2.2.4.1. Mode of operations of cation chemosensors	14
1.2.2.4.2. Mode of operations of anion chemosensors	16
1.2.2.4.2.1. Binding site-signaling subunit method	17
1.2.2.4.2.2. Displacement approach	17
1.2.2.4.2.3. Chemodosimeter approach	18

1.2.2.5. <i>Mode of action of pH chemosensors</i>	18
1.2.2.6. <i>Mode of action of nitroaromatic compound (NAC) chemosensors</i>	19
1.2.2.7. <i>Mode of action of nerve agent chemosensors</i>	19
1.3. Aim and objectives of the present thesis work	20
References	22
Chapter 2	26-46
Reversible acidochromism of a benzoxazole-based scaffold and Construction of reconfigurable dual output molecular logic gates	
2.1. Introduction	26
2.2. Experimental sections	28
2.2.1. <i>Materials</i>	28
2.2.2. <i>Instrumentations</i>	28
2.2.3. <i>Solution preparation</i>	28
2.3. Results and discussions	29
2.3.1. <i>Synthesis and characterizations</i>	29
2.3.1.1. <i>Synthesis of 4-(2-benzofuranyl) benzylamine</i>	29
2.3.1.2. <i>Synthesis of BPP</i>	29
2.3.2. <i>Colorimetric and UV–visible spectral analysis</i>	32
2.3.3. <i>Density functional theoretical analysis</i>	34
2.3.4. <i>Test strips for the detection of acid in the non-aqueous medium</i>	38
2.3.5. <i>Reversibility and sensor performance of acidochromic BPP</i>	39
2.3.6. <i>Molecular logic gate construction</i>	40
2.4. Conclusion	41
References	43
Chapter 3	47-66
Spectroscopic and density functional studies on the interaction of a naphthalene derivative with anions	
3.1. Introduction	47
3.2. Materials and methods	49
3.2.1. <i>Materials</i>	49
3.2.2. <i>Instrumentations</i>	49
3.2.3. <i>Preparation of stock solutions</i>	49
3.2.4. <i>Calculation of the LOD and binding constant</i>	49

3.2.5. Job's plot measurement for NIMO with F^- ions	49
3.2.6. 1H NMR titration studies of F^- ions	49
3.2.7. Computational details	49
3.3. Results and discussion	50
3.3.1. Synthesis and characterization of NIMO	50
3.3.2. Spectrophotometric titration of NIMO with anions	53
3.3.3. NIMO --- F^- ions binding mechanism	55
3.3.4. 1H NMR titration studies of F^- ions	56
3.3.5. Computational investigations	57
3.3.6. Paper strips for the detection of F^- ions	60
3.3.7. Smartphone-assisted assay analysis in quantifying F^- ions	60
3.3.8. Real sample analysis to quantify F^- ions	61
3.3.9. Construction of molecular logic gate	61
3.4. Conclusion	63
References	64
Chapter 4	67-97
A 4-amino phthalimide derive smart molecule for sequential detection of aluminium ions and picric acid	
4.1. Introduction	67
4.2. Experimental sections	69
4.2.1. Materials and instrumentations	69
4.2.2. Solutions Preparation	69
4.2.3. Fluorescent quantum yield measurement	69
4.2.4. Cell lines and culture	70
4.2.5. Cell viability assay	70
4.2.6. Fluorescence microscopic image analysis	70
4.2.7. Synthesis of the salen-type molecule, HID	70
4.3. Results and discussion	73
4.3.1. Synthesis and characterizations	73
4.3.2. Photophysical properties of HID	73
4.3.3. Metal ion sensing	76
4.3.3.1. UV-visible absorption studies	76
4.3.3.2. Fluorescence studies	78

4.3.3.3. <i>Photoluminescence lifetime decay analysis</i>	80
4.3.3.4. <i>Estimation of stoichiometric relation and binding affinity</i>	82
4.3.3.5. <i>Effect of pH on Al³⁺ ions detection employing HID</i>	85
4.3.4. <i>Utilization of the HID-Al³⁺ complex for the detection of PA</i>	86
4.3.5. <i>Fabrication of test kit for the recognition of Al³⁺ ions</i>	89
4.3.6. <i>Construction of molecular logic gate</i>	89
4.3.7. <i>Cytotoxicity and bioimaging investigation</i>	90
4.4. Conclusion	91
References	93
Chapter 5	98-121
Photoluminescent pyrene-based ionic liquid derived ratiometric organo nanosensor for rapid and selective detection of picric acid	
5.1. Introduction	98
5.2. Experimental sections	100
5.2.1. <i>General method</i>	100
5.2.2. <i>Preparation of NAC solutions</i>	100
5.2.3. <i>Synthesis of the sodium salt of pyrene butyrate, PbNa</i>	100
5.2.4. <i>Synthesis of Gumbos, PbIL</i>	100
5.2.5. <i>Decanol-water partition coefficient ($K_{o/w}$)</i>	101
5.2.6. <i>UV-visible/fluorescence studies</i>	101
5.3. Results and discussions	102
5.3.1. <i>Characterization of synthesized PbIL</i>	102
5.3.2. <i>Spectroscopic behavior of PbIL and its application as FL inks</i>	105
5.3.3. <i>Preparation and characterization of the PbIL-based nanoparticle nPbIL</i>	107
5.3.4. <i>Detection of NACs employing the fabricated nPbIL</i>	108
5.3.4.1. <i>Selectivity and interference study</i>	110
5.3.4.2. <i>Estimation of detection limit</i>	111
5.3.4.3. <i>Fabrication of nPbIL-stained paper strips-based test kit</i>	113
5.3.5. <i>Application of neat PbIL for the detection of PA</i>	115
5.4. Conclusion	117
References	118
Chapter 6	122-141

Fluorogenic, specific detection of sarin gas mimic, diethylchlorophosphate	
6.1. Introduction	122
6.2. Experimental sections	124
6.2.1. <i>Materials and instrumentations</i>	124
6.2.2. <i>Synthesis of the acridine-based AMA and its characterization</i>	124
6.2.3. <i>Determination of fluorescence quantum yield</i>	126
6.3. Results and discussions	126
6.3.1. <i>UV-visible spectrophotometric analysis</i>	126
6.3.2. <i>Fluorometric investigation</i>	127
6.3.3. <i>Selectivity and sensitivity analysis</i>	128
6.3.4. <i>Response time investigation</i>	129
6.3.5. <i>Detection mechanism</i>	130
6.3.6. <i>Reversibility studies</i>	131
6.3.7. <i>Estimation of LOD</i>	133
6.3.8. <i>Application of AMA as solid-state sensors</i>	134
6.3.9. <i>Dip-stick experiment for the detection of DCP vapor</i>	134
6.4. Conclusion	138
References	139
Chapter 7	142
Summary and future prospectives	
Appendices	143-145
Bibliography	146-167
