

Contents

1	Introduction	4
2	Vaidya-Tikekar Model: Exact Solutions	18
2.1	Introduction	18
2.2	Equilibrium configuration of a star: Standard approach	20
2.3	Alternative method	21
2.3.1	The solution of Vaidya and Tikekar [63]	23
2.3.2	The solution of Tikekar [64]	23
2.3.3	The solution of Maharaj & Leach [66]	24
2.3.4	The solution of Mukherjee <i>et al</i> [67]	24
2.4	Discussions	28
3	General Solution for a Class of Static Charged Spheres	33
3.1	Introduction	33
3.2	Einstein-Maxwell equations	34
3.3	General Solution	38
3.4	Physical analysis	39
3.5	Discussions	44
4	Strange Stars	47
4.1	Introduction	47

<i>CONTENTS</i>	2
4.2 SAX J1808.4-3658 and the strange star EOS	49
4.3 Alternative model	53
4.4 Numerical Results	54
4.5 Discussions	56
5 Quark-Diquark Stars	61
5.1 Introduction	61
5.2 Combined boson-fermion star	62
5.3 Quark-diquark EOS	67
5.4 Results	71
5.5 Discussions	74
6 Stability Analysis	77
6.1 Introduction	77
6.2 Methodology	78
6.3 Results	80
6.4 Discussions	81
7 Scaling Property in Cold Compact Stars	86
7.1 Introduction	86
7.2 Scaling law in strange star EOS	87
7.3 Standard approach	88
7.4 Scaling law in Vaidya-Tikekar [63] model	89
7.5 Discussions	92
8 Core-Envelope Model for Compact Stars	93
8.1 Introduction	93
8.2 Core-envelope model	95
8.2.1 Boundary conditions	96

<i>CONTENTS</i>	3
8.3 Numerical analysis	97
8.3.1 Case I	97
8.3.2 Case II	98
8.4 Discussions	99
9 Radiating Spherical Collapse with Heat Flow	102
9.1 Introduction	102
9.2 Interior spacetime	104
9.3 Junction conditions	107
9.4 Final static solution	108
9.5 Results and discussions	110
10 Concluding Remarks	114
11 Bibliography	118
12 List of Publications	129
