

List of figures

Fig. 1.1. Total yearly domestic demand of tea in India	4
Fig. 1.2. Total export of tea from India	4
Fig. 1.3. Total yearly production of tea in India	5
Fig. 1.4. Yield (production/hectare) of tea in India	5
Fig. 1.5. Yearly total production of tea in Sri Lanka	6
Fig. 1.6. Yearly total production of tea in China	6
Fig. 1.7. Yearly total production of tea in Indonesia	6
Fig. 1.8. Yearly total production of tea in Vietnam	7
Fig. 1.9. Block diagram of field management practices in tea	8
Fig. 1.10. Three levels of benefit	17
Fig. 1.11. The levels of expected benefits in use of our proposed system	18
Fig. 2.1. Classification of major tea insect pests	25
Fig. 2.2. Classification of tea diseases	37
Fig. 2.3. Crop production of Radharani T.E.	44
Fig. 2.4. Pest and disease infestation in Radharani T.E.	44
Fig. 2.5. Crop production of Mechpara T.E.	45
Fig. 2.6. Pest and disease infestation in Mechpara T.E.	45
Fig. 2.7. Crop production of Madhu T.E.	45
Fig. 2.8. Pest and disease infestation in Madhu T.E.	46
Fig. 2.9. Crop production of Kalchini T.E.	46
Fig. 2.10. Pest and disease infestation in Kalchini T.E.	46
Fig. 2.11. Crop production of Majherdabri T.E.	47
Fig. 2.12. Pest and disease infestation in Majherdabri T.E.	47
Fig. 3.1. Expert system life cycle	73
Fig. 3.2. An architecture of a typical expert system	74
Fig. 3.3. A block diagram indicating ES-development environment	75
Fig. 3.4. Block diagram of the basic modules of various expert systems	79
Fig. 4.1. Fragment of a semantic net	108
Fig. 4.2. The rule interpreter cycles through a match-execute sequence	110
Fig. 4.3. Rule execution can modify the facts in the knowledge base	110
Fig. 4.4. Facts added by rules can match rules	111
Fig. 4.5. Rule execution can affect the real world	111
Fig. 4.6. Inference chain for inferring the spill material	112
Fig. 4.7. A general frame structure	112
Fig. 4.8. A Ford frame with various slot types	113
Fig. 4.9. A script for entering in a restaurant	114
Fig. 4.10. Inheritance from class to object	117
Fig. 4.11. Inheritance of operations from class to object	118

Fig. 7.1.	A block diagram for architectural components of <i>TEAPEST</i>	169
Fig. 7.2.	Flow diagram of <i>TEAPEST</i>	170
Fig. 8.1.	Block diagram of <i>TEADISEASE</i>	185
Fig. 8.2.	Flow diagram of <i>TEADISEASE</i>	186
Fig. 9.1.	Block diagram of <i>TEAPEST/WWW</i>	205
Fig. 9.2.	Block diagram of <i>TEADISEASE/WWW</i>	207
Fig. 9.3.	Block diagram for implementation process of <i>TEAPEST/WWW</i> and <i>TEADISEASE/WWW</i>	210
Fig. 10.1.	System architecture	217
Fig. 10.2.	Structure of features, categories and exemplars	218
Fig. 10.3.	RFW-curve of Feature -A2 of Red Spider attack	224
Fig. 10.4.	RFW-curve of Feature -D5 of Red Spider attack	224
Fig. 10.5.	RFW-curve of Feature -E2 of Red Spider attack	224
Fig. 10.6.	RFW-curve of Feature -J1 of Red Spider attack	225
Fig. 10.7.	RFW-curve of Feature -K1 of Red Spider attack	225
Fig. 10.8.	RFW-curve of Feature -A3 of Helopeltis attack	226
Fig. 10.9.	RFW-curve of Feature -A4 of Helopeltis attack	226
Fig. 10.10.	RFW-curve of Feature -C7 of Helopeltis attack	226
Fig. 10.11.	RFW-curve of Feature -E1 of Helopeltis attack	227
Fig. 10.12.	RFW-curve of Feature -K1 of Helopeltis attack	227
Fig. 10.13.	RFW-curve of Feature(Perforation of Leaf) of Helopeltis attack	227
Fig. 11.1.	McCulloch-Pitts model of a neuron for present problem	237
Fig. 11.2.	Block diagram of the system architecture	238
Fig. 11.3.	The block diagram of the classifier for M categories	239
