

ACKNOWLEDGEMENT

My interest on myxobacteria initiated when I was selected to deal with this wonderful creatures as my disertation work in M.Sc. classes. This enlightenment led me to commence the present work. At the first opportunity, I offer heartfelt gratitude to my supervisor Dr P. K. Sarkar, Senior lecturer in Botany, University of North Bengal. I am indebted to Dr Sarkar for his constant encouragement and guidance throughout this work, and also for providing me with necessary laboratory facilities.

I am thankful to the management of IFB Agro Industries Ltd, Calcutta for granting me leave for the completion of my thesis.

I am grateful to Prof. K. B. Dutta, Prof. P. K. Basu, Dr B. N. Chakraborty, Dr U. Chakraborty and Dr A. P. Das of the Department of Botany, University of North Bengal for their generous help whenever I needed. Sincere gratitude is extended to Prof. A. K. Chakraborty and Dr D. C. Deb of the Department of Zoology of this university for their kind inspiration.

I owe my thanks to Dr P. Ghosh for chemical analysis of the isolated compound, and to Mr M. Dutta for preparing the line drawings. I thankfully acknowledge the help I obtained from my co-fellows, Sk A. Hossain, Mr P. K. Pal, Mr J. P. Tamang, Mr A. Chakraborty, Ms S. Banerjee and Ms G. Das. I recall many stimulating discussion with them.

I gratefully acknowledge the financial help that I received from the Council of Scientific and Industrial Research, New Delhi.

I acknowledge my thankfulness to the Department of Chemistry of this university, RSIC in Lucknow and IICB in Calcutta for running the spectra of the isolated antibiotic.

Finally, I must mention that I am priviledged by the constant inspiration and support showered by my family members.
