

CONTENTS

1. Introduction	1
2. Literature Review	4
3. Materials and Methods	20
3.1. Fish	20
3.1.1. Collection of diseased fish	20
3.1.2. Collection and maintenance of healthy fish for experimental works	20
3.2. Composition and preparation of media	22
3.3. Composition and preparation of Buffers and Reagents	26
3.4. Bacteria	26
3.4.1. Isolation of bacteria	26
3.4.2. Characterization of the isolated bacteria	27
3.4.2.1. Morphological characterization	27
3.4.2.2. Physiological and biochemical tests	28
3.5. Pathogenicity test of the isolated bacteria	31
3.6. Characterization of isolated bacteria based on some virulence factors	32
3.7. Cytotoxic effect of bacterial isolates on head kidney cells of healthy fish	33
3.8. Antibiotic susceptibility test by disc diffusion method	34
3.9. Isolation of DNA	35
3.9.1. Isolation of bacterial genomic DNA	35
3.9.2. Isolation and purification of plasmid	35

3.10.	Transformation of plasmid DNA to <i>E. coli</i> DH5 α strain	36
3.10.1.	Preparation of competent cell	36
3.10.2.	Uptake of DNA by competent cell	37
3.11.	Conjugational gene transfer	37
3.12.	PCR detection of the cytolytic enterotoxin gene and extracellular aerolysin gene	38
4.	Observations and Results	39
4.1.	Isolation and characterization of bacteria from ulcers of EUS affected fish	39
4.2.	Studies on pathogenicity and virulence of the isolated bacteria	46
4.2.1.	Pathogenicity test of the isolated bacteria	46
4.2.2.	Characterization of isolated bacteria based on some virulence factors	48
4.2.3.	Cytotoxic effect of bacterial isolates on head kidney cells of healthy fish	50
4.3.	Studies on <i>in vitro</i> antimicrobial susceptibility test of the isolated bacteria by disc diffusion	53
4.4.	Extraction of bacterial genomic DNA and plasmids of bacteria isolated from EUS affected fish	57
4.5.	Transfer of plasmids to the recipient DH5 α strain through transformation	59
4.6.	Transfer of plasmids to the recipient DH5 α strain through conjugation	59
4.7.	Detection of cytolytic enterotoxin and aerolysin genes in bacterial DNA and plasmids by PCR	62
5.	Discussion	64
6.	Summery	73
7.	References	76
