

List of Tables

Table	Title	Page#
3.1	Geographical locations from where germplasm were collected	36
3.2	Disks used for the Intrinsic Antibiotic Resistance (IAR) test	45
3.3	List of primers used for RAPD analysis	57
3.4	List of primers used for rep-PCR analysis	58
3.5	List of restriction enzymes used for PCR-RFLP	60
3.6	Details of partial 16SrRNA sequences retrieved from NCBI for phylogenetic analysis	63
4.1	Morphological characters of rhizobial isolates collected from various regions of North Bengal and Sikkim	73
4.2	Results of biochemical tests performed to characterize rhizobial isolates of various regions of North Bengal and Sikkim	74
4.3	Results of <i>in vitro</i> PGPR properties of the <i>Rhizobium</i> strains	88
4.4	The effect of <i>Rhizobium</i> inoculation on different growth parameters of French bean (<i>Phaseolus vulgaris</i> L.) in green house condition.	92
4.5	Correlation between different growth parameters of French bean treated with 11 <i>Rhizobium</i> strains	93
4.6	Analysis of different parameters of soil before and after sowing of the French bean seeds and the estimation of aerial shoot nitrogen content.	94
4.7	List of <i>Rhizobium</i> DNA samples showing their purity	97
4.8	Total number and size of amplified bands, number of monomorphic and polymorphic bands and percentage of polymorphism generated by the RAPD primers.	98
4.9	The similarity matrix obtained using Dice coefficient of similarity among the 18 strains of <i>Rhizobium</i> based on RAPD profiling	100
4.10	Total number and size of amplified bands, number of monomorphic and polymorphic bands and percentage of polymorphism generated by the rep-PCR primers	101
4.11	The similarity matrix obtained using Dice coefficient of similarity among the 18 accessions of <i>Rhizobium</i> based on REP-PCR profiling	104
4.12	The similarity matrix obtained using Dice coefficient of similarity among the 18 accessions of <i>Rhizobium</i> based on ERIC-PCR profiling	107
4.13	The similarity matrix obtained using Dice coefficient of similarity among the 18 accessions of <i>Rhizobium</i> based on BOX-PCR profiling	109
4.14	The similarity matrix obtained using Dice coefficient of similarity among the 18 accessions of <i>Rhizobium</i> based on combined rep-PCR profiling	111
4.15	Total fragments, number of monomorphic and polymorphic bands of 16SrDNA generated using different restriction enzymes	114

Table	Title	Page#
4.16	The similarity matrix obtained using Dice coefficient of similarity among the 18 accessions of <i>Rhizobium</i> based on 16SrDNA-PCR-RFLP profiling	115
4.17	GenBank accession numbers for partial 16SrRNA sequence of <i>Rhizobium</i> strains	117
4.18	Annotation and assembly report of <i>Rhizobium</i> sp RSm-3 as per IMG.	121
4.19	Spearman's rho correlation of <i>Rhizobium</i> sp. RSm-3; A. Nitrogen fixing genes; B. Siderophore forming genes; C. IAA producing genes of <i>Rhizobium</i> sp. RSm-3	124
