Acknowledgements ..	(I)
Preface ..	(III)
Synopsis ..	(VIII)

CHAPTER - I

1. Introduction ..	1
2. Air shower component ..	1
2.1 Electromagnetic component	1
2.2 The Hadronic component	3
2.3 The muon component ..	5
2.4 Mu - poor air showers ..	6
3. Air shower simulation calculations	8
4. Present work ..	7
5. Future work ..	8

CHAPTER - II

1.1 Introduction ..	9
1.1(a) The neon flash-tubes	9
1.1(b) The principle of operation	10

	Page
2. The characteristics of the flash-tubes ..	11
2.1 The application of flash-tubes for the construction of flash-tube chamber as muon detector	15
3. The cloud chamber ..	22
4. Plastic scintillators ..	22

CHAPTER - III

Electronics of the measuring system and response-calibration.

1. Introduction ..	23
2. Circuit operation - a panorama	24
3. Octal system of printing the tube glow information of the magnetic spectrograph	25
4. Selection system and coincidence unit	27
5. Master Control Unit ..	29
6. Flash chamber and magnetic spectrograph control unit and the high voltage pulsing unit ..	30
7. 'Sample-Hold' and analogue multiplexer for multidetector systems	30
7.1 Principle of operation	31
7.2 Description of the circuit	32
7.3 Operation of the circuit	34
8. Monitor unit ..	37

	Page
9. A simple analog-to-digital converter ..	38
9.1 Principle of operation	39
9.2 Description of the converter circuit	39
9.3 Operation of the circuit	42
10. Random access memory with programmer for data acquisition and printing in a multidetector system ..	46
10.1 Description of the circuit	47
10.2 Operation of the circuit	48
11. Memory unit of magnetic spectrograph	52
12. Measurement of single particle pulse height ..	54
12.1 Experimental set up for the measurement of single particle pulse height	54
12.2 Gross calibration of the channels	56
13. Response of the flash tube chamber	57
14. Day-to-day maintenance of the circuit ..	57

CHAPTER - IV

Method of analysis

1. Handling of data ..	58
2. Evaluation of shower parameters	58

	Page
2.1 Age as constant parameter	59
2.2 χ^2 minimisation ..	60
3. Estimation of error in the method of analysis ..	64
3.1 Artificial shower test	64
3.2 Error due to the size of the detectors ..	66
4. Efficiency of the array	67
4.1 Calculation of the average triggering probability	69
5. Principle and maximum detectable momentum of the magnetic spectrograph	69

CHAPTER - V

Studies on extensive air showers lateral distribution of electrons

1. Introduction ..	74
2. Experimental arrangement	75
2.1 Muon detector ..	76
3. Shower selection and monitoring	76
4. Data analysis ..	77
4.1 Density of electron ..	77
4.2 Determination of shower size and core position ..	77
4.3 Errors to data ..	78

		Page
5.	Results	78
5.1	Shower size	78
5.2	Lateral distribution of electrons	80
6.	Discussion	80
	References	82
