

TABLE OF CONTENTS

Chapter	Description	Page
	Declaration	i
	Abstract	ii-ix
	Preface	x-xi
	List of tables	xiv
	List of figures	xv-xvi
	List of appendices	xvii
1	Introduction	1-9
2	Review of literature	10-60
2.1	Biodiversity hotspots	10
2.2	Floristic variation in Darjeeling and Tea linkage	12
2.3	India and floral endemism	31
2.4	Cucurbitaceae and its relevance in an Indian perspective	32
2.5	Cucurbitaceae A.L. de Jussieu	34
2.6	Cucurbits as natural remedial agents	36
2.7	Phytochemical constituents of cucurbits	38
2.8	Phylogenetic attributes	42
2.9	<i>Herpetospermum</i> and its representative species	43
2.10	DNA barcoding	46
2.11	Antioxidants in disease prevention	47
2.12	Antimicrobial activity using Well-diffusion method	51
2.13	Silver nanoparticles	51
2.14	Gas chromatography–mass spectrometry (GC-MS)	53
2.15	Biochemical and molecular characterization of <i>Herpetospermum</i>	54
2.16	Nuclear Magnetic Resonance (NMR)	58
2.17	Molecular docking	58
2.18	<i>In vitro</i> propagation among Cucurbits	59
3	Materials and methods	61-94
3.1	Collection of plant material	61
3.2	DNA barcoding and molecular authentication	62
3.3	Study of ecological parameters	64
3.4	Physical characterization of plant sample	69
3.5	Phytochemical analysis of plant sample	70
3.6	Evaluation of antioxidant activity	72
3.7	Synthesis of <i>H. darjeelingense</i> extract based Silver nanoparticles (AgNP's)	77
3.8	Characterization of synthesized Silver nanoparticles (AgNP's)	77
3.9	Gas Chromatography and Mass Spectroscopic (GC-MS) analysis	79
3.10	Identification of bioactive constituents in <i>H. darjeelingense</i> extracts	80
3.11	Study of chemo-taxonomic variation	80
3.12	Tracing of metabologenesis pathway of potential bioactive molecules	80
3.13	Study of cardinal genes controlling the metabologenesis pathway	80
3.14	Computation of metabolic energy cost of bioactive molecules	81
3.15	Evaluation of antidiabetic activity	81
3.16	Anti-lipid peroxidation assay of sample extracts	81
3.17	Isolation of pure compound	82
3.18	Assessment of molecular features and drug likeness properties	84
3.19	Evaluation of ADME-Tox status	85
3.20	Studies on molecular docking	85
3.21	Experimental protocol of Sulforhodamine B (SRB) assay for studying <i>in vitro</i> anti-cancer activity of isolated pure compounds	89
3.22	<i>In vitro</i> culture studies	90
3.23	Evaluation of endophytic status	92

4 Results and discussion	95-225
4.1	Authentication of plant material through DNA barcoding and its bioinformatic analysis 95
4.2	Study of ecological status of the plant 106
4.3	Qualitative assay of <i>H. darjeelingense</i> 113
4.4	<i>In vitro</i> quantitative assay of sample extracts 117
4.5	Synthesis and study of biogenic Silver nano particles 125
4.6	GC-MS analysis of <i>H. darjeelingense</i> based foliar extracts 130
4.7	Evaluation of metabolomic variation in plants growing in tea and non-tea growing regions of Darjeeling hills with a hint on ecological stress impact 136
4.8	Study of chemo-taxonomic variation in <i>H. darjeelingense</i> samples collected from manifold locations 142
4.9	Metabolomics of bioactive metabolites in <i>H. darjeelingense</i> 147
4.10	Evaluation of metabolomic energy cost 158
4.11	Hepatoprotective assay 158
4.12	Antidiabetic assay 162
4.13	Isolation of pure compounds 165
4.14	Physicochemical characterization of query drug compounds 169
4.15	ADMET prediction of test molecules 172
4.16	Study of molecular docking of isolated compounds against cancer linked proteins 173
4.17	<i>In vitro</i> anticancer assay of isolated pure compounds 180
4.18	Micropropagation studies 182
4.19	Metabolomic study of <i>in vitro</i> regenerated <i>H. darjeelingense</i> plant 185
4.20	Understanding the endophytic traits of the plant 198
Conclusion	226-230
Bibliography	231-251
Appendix	A1-5
