

CONTENTS

	Page No.
1. Introduction and Scope of Work	1-8
1.1 Introduction	
1.2 General Scope and Objective of the Work	
2. Literature Review	9-46
2.1 Historical background of Biomethanation	
2.2 Bio methanation in India	
2.3 Development status of anaerobic digestion technology	
2.4 Development of Bioreactors / digester in India and abroad	
3. Characterization of Biomass	47-76
3.1 Introduction	
3.2 Physical Properties	
3.3 Chemical Properties	
3.4 Relationship of Biomass Properties and Conversion process	
3.5 Biomass Energy conversions Technology	
3.6 Anaerobic digestion of various Organic waste	
4. Anaerobic Digestion	77-101
4.1 Anaerobic digestion and chemistry of bio methanation	
4.2 Microbiology of Methanogenic bacteria	
4.3 Organic materials for biogas production and their characteristics	
4.4 Factors affecting methane production	
4.5 Benefits and limitation of Biogas system	

5. Experimental Sets up and Plant Layout	102-134
5.1 Experimental sets up and procedure	
5.2 Design of proposed Digester for Anaerobic Digestion	
5.3 Auto control for pH of slurry mixture in the Digester	
5.4 Weighing device for maintaining Solid- Liquid ratio	
5.5 Drive mechanism of Scum beaker	
5.6 Specification of the Equipment/Instrument	
5.7 Methods and Preparation of different Solutions used in ORSAT apparatus	
5.8 Analysis of Biogas using Chromatograph	
5.9 Raw materials and chemicals used	
5.10 Characterization of kitchen waste	
5.10.1 Proximate Analysis	
5.10.2 Determination of C, H and N	
5.10.3 Determination of Calorific value of Biogas	
5.10.4 Results of Analysis of Kitchen Waste	
5.11 Determination of Mean particle size	
5.12 Proposed plant layout including Material Handling Systems	
6. Up gradation of Biogas	135-147
7. Chemical Analysis of Solid Remnants and Evaluation of Mixed stock as organic manure	148-150
8. Results and Discussions	151-168
9. Conclusions	169-171
10. References	172-192
Appendix -A	193-210
