Chapter - 1	1-25
Introduction	
1.1 Introduction	1
1.2 Homo and copolymers of acrylamide	3
1.3 Vermiculite	4
1.4 Clay polymer interaction	7
1.5 Clay catalyzed polymerization	13
1.6 References	18
Chapter - 2	26-29
Scope and Object	
Chapter - 3	30-86
Studies on homopolymerization of acrylamide and copolymerization of acrylamide with diacetone acrylamide on aqueous vermiculite surface	
3.1 Aqueous polymerization of acrylamide by Fe(III)-Thiourea redox couple on vermiculite surface	30-55
3.1.1 Introduction and review of previous work	30
3.1.2 Experimental	38
3.1.3 Results and discussion	41
3.2 Copolymerization of acrylamide with diacetone acrylamide by Fe(III)-Thiourea redox couple on vermiculite surface	56-70
3.2.1 Introduction and review of previous work	56
3.2.2 Experimental	61
3.2.3 Results and discussion	62
3.3 General discussion	71
3.4 References	78

Chapter - 4	87-111
Studies on solution properties of acrylamide in water -1,4-dioxane mixtures	
4.1 Introduction and review of previous work	87
4.2 Results and discussion	96
4.3 References	107
Chapter - 5	112-137
Studies on free radical cross-linking copolymerization of acrylamide with N,N-methylene-bis-acrylamide: swelling and thermal behaviour of the hydrogel	
5.1 Review of previous work	112
5.2 Free radical cross-linking copolymerization of acrylamide with N,N-methylene-bis-acrylamide by Fe(III)-Thiourea and Ce(IV)-Thiourea redox initiator systems	118-121
5.2.1 Introduction	118
5.2.2 Experimental	119
5.2.3 Results and discussion	120
5.3 Swelling and thermal behaviour of hydrogel of acrylamide with N,N-methylene-bis-acrylamide prepared by Fe(III)-Thiourea and Ce(IV)-Thiourea redox initiator systems	122-131
5.3.1 Introduction	122
5.3.2 Experimental	123
5.3.3 Results and discussion	124
5.4 References	132
Chapter - 6	138-147
Summary and conclusion
