UNIT - I

PLANT GROWTH REGULATORS ON GROWTH, METABOLISM AND YIELD

	Pages
1.0 Summary	1 - 4
1.1 Introduction	5 - 6
1.2 Literature review	7 - 27
Biology of chayote (<i>Sechium edule</i> Sw) - a brief historical overview :	
A short botanical account of the plant	
Propagation of the plant	
Varieties of chayote	
Chemical and nutritional composition	
Plant growth retardants	
Seedling growth and metabolism	
Plant growth and metabolism	
Senescence and crop yield	
1.3 Aims and objectives of the present work	28 - 30
1.4 Materials and methods	31 - 41
Plant material	
Soil preparation and method of sowing	
Meteorological data	
Design of Experiments	
I. Analysis of the effects of whole fruit treatment with growth retardants on germination, growth, metabolism and crop yield	
Growth analyses	
Phenological analyses	
Biochemical analyses :	
Chlorophyll	
Carbohydrates	
Protein	
Nucleic acids	
Catalase activity	
Peroxidase activity	
IAA-Oxidase activity	
RNase activity	
Yield analyses	
II. Analyses of effects of growth retardants treated at sapling stage on growth, metabolism and crop yield	
Growth analyses	
Biochemical analyses	
Yield analyses	

III. Analyses of effects of growth retardants treated at preflowering stage followed by growth promoters treated at flowering stage on growth, metabolism and crop yield.

Growth analyses
 Biochemical analyses
 Yield analyses

Statistical analyses

1.5	Results	42 - 51
I	Whole fruit treatment at sprouting stage	
	Changes in chlorophyll and protein levels	
	Changes in soluble and insoluble carbohydrate levels	
	Changes in RNA and DNA levels	
	Changes in peroxidase and catalase activities	
	Changes in IAA-oxidase and RNase activities	
	Changes in vine length and stem circumference	
	Change in number of days required for inception of plant senescence, fruit number, fruit weight and root weight per plant	
II	Foliar treatment at sapling stage	
	Changes in chlorophyll and protein levels	
	Changes in soluble and insoluble carbohydrate level	
	Changes in RNA and DNA levels	
	Changes in peroxidase and catalase activities	
	Changes in IAA-oxidase and RNase activities	
	Change in vine length and stem circumferences	
	Changes in number of days required for inception of plant senescence, fruit number, fruit weight and root weight per plant	
III	Foliar treatment with growth retardants at preflowering stage and retardant followed by hormone treatment at flowering stage	
	Changes in chlorophyll and protein levels	
	Changes in soluble and insoluble carbohydrate levels	
	Changes in RNA and DNA levels	
	Changes in peroxidase and catalase activities	
	Changes in IAA-oxidase and RNase activities	
	Changes in vine length and stem circumference	
	Changes in number of days required for inception of plant senescence, fruit number, fruit weight and root weight per plant	
	Changes in the number of female and male flowers per plant	
1.6	Discussion	52 - 63
	Photographs	64 - 71
	Tables	72 - 98
1.7	References	99 - 114

UNIT - II

INTERPLAY OF SOME ENZYMES

	Pages
2.0 Summary	115
2.1 Introduction	116
2.2 Literature review	117 - 151
Distribution of acid phosphatase (s) in plants	
Distribution of alkaline phosphatase (s)	
Distribution of L- <i>myo</i> -inositol-1-phosphate synthase(s)	
Distribution of Fructose-I, 6-bis phosphatase(s)	
2.3 Aims and objectives of the present work	152
2.4 Materials and methods	153 - 166
Materials	
Methods	
Isolation of alkaline phosphatase (s)	
Assay procedure for alkaline phosphatase (s)	
Isolation of acid phosphatase(s)	
Assay procedure for acid phosphatase(s)	
Isolation of L- <i>myo</i> -inositol-1-phosphate synthase(s)	
Assay procedure for L- <i>myo</i> -inositol-1-phosphate synthase(s)	
Isolation of Fructose-1,6-bisphosphatase(s)	
Assay procedure for fructose-1,6-bis phosphatase(s)	
Isolation of chloroplasts from leaves of <i>Secchium edule</i> Sw.	
Isolation procedure of chloroplasts.	
Identification of the purity of the chloroplasts	
Partial purification of photosynthetic (Chloroplastidial) fructose-1,6-bisphosphatase from <i>Secchium edule</i>	
2.5 Results	167 - 182
Distribution and profile of acid phosphatase (s) activity from the plant portions of different developmental stages of <i>Secchium edule</i> Sw.	
Distribution and profile of alkaline phosphatase(s) activity from the plant portions of different developmental stages of <i>Secchium edule</i> Sw.	
L- <i>myo</i> -insitol-1-phosphate synthase(s) activity from the germinating seeds of <i>Secchium edule</i> Sw.	
L- <i>myo</i> -inositol-1-phosphate synthase(s) activity from the seeds during maturation from <i>Secchium edule</i> Sw.	
Detection of Fructose-1,6-bisphosphatase activity in the leaves of <i>Secchium edule</i> Sw.	

Identification of isolated chloroplasts from the leaves of *Sechium edule* Sw.
 Partial purification of photosynthetic fructose-1,6-bisphosphatase from
 the isolated chloroplasts of *Sechium edule* . Sw.

Fundamental characteristics of photosynthetic fructose-1,6-bisphosphatase
 from *Sechium edule* Sw.

Stability

Requirements for photosynthetic fructose-1,6- bisphosphatase of
Sechium edule Sw.

Effect of protein concentrations

Progress of enzymic reaction with time

Temperature sensitivity

Substrate specificity

Effect of substrate concentration of chloroplastial form of
Sechium edule Sw.

Fructose-1,6-bisphosphatase activity and determination of Km
 and V_{max} values.

Photosynthetic fructose-1,6-bisphosphatase activity as function of pH

Effect of monovalent cations

Effect of divalent cations and heavy metals

Effect of EDTA

Identification of chloroplatic fructose-1,6-bisphosphatase as photosynthetic
 enzymes in *Sechium edule* Sw.

Plastidial Fructose-1,6-bisphosphatase activity of *Sechium edule* :

Effect of alternate light/dark or dark growth conditions

Plastidial Fructose-1,6-bisphosphatase activity of *Sechium edule* :

Effect of externally administered glucose.

1.6 Discussion **183 - 187**

1.7 References **188- 200**
