

Table of Contents

<i>Chapter</i>	<i>Description</i>	<i>Page#.</i>
	Declaration	i
	Abstract	ii
	Preface	vi
	List of tables	x
	List of figures	xi
	List of appendices	xii
1	Introduction	1-11
2	Review of Literature	12-40
2.1	History of bamboo research	12
2.2	Bamboo taxonomy	13
2.3	Propagation of bamboo	21
2.4	Bamboo and human health	32
2.5	Databases	39
3	Materials and Methods	41-64
3.1	Germplasm collection	41
3.2	Diversity studies of North Bengal bamboos	43
3.3	<i>In vitro</i> regeneration of indigenous sp. <i>D. strictus</i>	54
3.4	Antioxidant profiling of bamboo leaf of North Bengal	57
3.5	Creation of database	63
4	Results and Discussion	65-120
4.1	North Bengal in brief	65
4.2	Collection of plant material	65
4.3	Diversity studies of bamboos of North Bengal	69
4.4	<i>In vitro</i> regeneration of <i>D. strictus</i>	93
4.5	Antioxidant potential of bamboo leaf	101
4.6	Creation of database	117
	Conclusion	121-122
	Bibliography	123-138
	Index	139-141
	Appendix	A1-A5

List of Tables

Table	Title	Page #
2.1	Various disinfecting chemicals used in the culture of bamboos	25
2.2	List of the bamboo species and the plant growth regulator used for its regeneration	28
2.3	Incubation conditions required by bamboo species	29
2.4	Hardening materials used and survival rate of regenerated bamboos	33
2.5	List of chemical compounds and their structure isolated from different bamboo species	35
3.1	List of RAPD primers used	47
3.2	List of primers used for ISSR analysis	49
3.3	List of restriction enzymes along with their cutting site and temperature	51
4.1	List of different species and varieties of bamboo found in North Bengal	66
4.2	List of samples showing their purity	69
4.3	Total number and size of amplified bands, number of monomorphic and polymorphic bands generated and percentage of polymorphism generated by the RAPD primers	71
4.4	The similarity matrix obtained using Dice coefficient of similarity among the 29 accessions of bamboo based on RAPD profiling	76a
4.5	Total number and size of amplified bands and number of polymorphic bands generated by ISSR primers	76
4.6	The similarity matrix obtained using Dice coefficient of similarity among the 29 accessions of bamboo based on ISSR profiling	79a
4.7	The similarity matrix obtained using Dice coefficient of similarity among the 29 accessions of bamboo based on combined RAPD and ISSR profiling	83a
4.8	Total fragments, number of monomorphic and polymorphic bands generated by using different restriction enzymes	84
4.9	The similarity matrix obtained using Dice coefficient of similarity among the 29 accessions of bamboo based on RFLP analysis of trnL-trnF	87a
4.10	List of bamboo species with the GenBank accession for TrnL-TrnF region	90
4.11	Effect of BAP and Kinetin on bud breaking frequency, shoot bud proliferation and shoot length	96
4.12	Effect of BAP on shoot proliferation in the subsequent subculture	96
4.13	Effect of IBA and NAA on various parameters of <i>in vitro</i> rooting in <i>Dendrocalamus strictus</i>	97
4.14	Combined effect of IBA and NAA on <i>in vitro</i> rooting	97
4.15	PCR amplicons obtained from RAPD and ISSR markers in <i>in vitro</i> raised <i>Dendrocalamus strictus</i>	99
4.16	Plant yield of different bamboo leaf extracts	102
4.17	Total phenol contents of different bamboo leaf extracts	102
4.18	Total flavonoid contents of different bamboo leaf extracts	103
4.19	Total flavonol contents of different bamboo leaf extracts	104
4.20	Total proanthocyanidin contents of different bamboo leaf extracts	105
4.21	Effect of <i>Bambusa balcooa</i> aqueous leaf extract on fasting blood glucose, plasma insulin and glycated Hb levels in control and alloxan induced diabetic rats	114
