
TABLE OF CONTENTS

Review of Literature	1-14
1. Gut microbiota	1
2. Role of gut bacteria in fish physiology	1-2
3. Review of research progress on loaches	3-7
3.1. Conservation and Threats	
3.2. Ecology and behavioural studies	
3.3. Molecular and genetics	
3.4. Reproductive biology	
3.5. Microbiology and pathology	
3.6. Physiology	
4. Introduction to <i>Lepidocephalichthys guntea</i>	7-9
4.1. Morphological remarks	
4.2. Anatomical remarks	
5. Review on research progress on <i>Lepidocephalichthys guntea</i>	9-13
5.1. Life history traits	
5.2. Reproductive biology	
5.3. Toxicity study	
5.4. Influence of water quality on bacterial contamination	
5.5. Antibiotic resistance profiling of the bacterial population of <i>Lepidocephalichthys guntea</i>	
5.6. Comparison of the gut bacterial population in gill breather vs facultative air breather fish	
Ethical approval for experiments on animals	13
Objectives of the study	14
Chapter 1: Enumeration of cultivable bacteria; both aerobic and facultatively anaerobic, with special emphasis on probiotic and putatively pathogenic strains in the gut of a scavenger loach <i>Lepidocephalichthys guntea</i>	15-44
1. Introduction	16-17
2. Materials and method	17-22
2.1. Collection of fish and isolation of gut bacteria	

2.2. Plating of gut content in different media	
2.3. Purification and maintenance of bacterial isolates	
2.4. Molecular characterization of bacterial isolates	
2.4.1. Isolation of genomic DNA from screened isolates	
2.4.2. PCR amplification of bacterial DNA using 16S rRNA gene specific primer	
2.4.3. Digestion of amplified product by HAEIII and determination of RFLP pattern	
2.4.4. Grouping of isolates according to their RFLP pattern	
2.5. Biochemical characterization of bacterial isolates	
2.6. Cloning and transformation	
2.6.1. Competent cell preparation	
2.6.2. Cloning of PCR amplified products in pGEM®-T Easy vector	
2.6.3. Transformation and blue-white screening	
2.6.4. Boiling lysis and PCR amplification of cloned products	
2.7. Taxonomic identification of gut bacteria	
3. Result	23-40
3.1. Aerobic bacterial density in the gut of <i>Lepidocephalichthys guntea</i>	
3.2. Micro-aerophilic bacterial density in gut of <i>Lepidocephalichthys guntea</i>	
3.3. Amplification of 16S rRNA-specific gene of selected bacterial isolates	
3.3.1. <i>Genomic DNA isolation and PCR amplification</i>	
3.3.2. <i>Digestion of amplified products by HAEIII and generation of operational taxonomic units</i>	
3.4. Biochemical characterization	
3.5. Taxonomic identification of autochthonous and allochthonous gut bacterial population	
3.5.1. <i>Taxonomic identification</i>	
4. Discussion	40-44
5. Conclusion	44
Chapter 2: Genomic characterization of few gut bacteria and understanding their role in fish physiology	45-80

1. Introduction	46-49
2. Materials and methods	49-52
2.1. Whole genome sequencing	
2.2. Whole genome based taxonomic identification	
2.3. Bacterial stress responses	

2.3.1. <i>Temperature stress</i>	
2.3.2. <i>Salt stress</i>	
2.3.3. <i>pH stress</i>	
2.3.4. <i>Antibiotic resistance profiling</i>	
2.3.4. <i>Heavy metal resistance profiling</i>	
2.4. Bioinformatics analysis	
3. Results	52-65
3.1. Isolation, characterization and taxonomic identification of gut isolates	
3.2. Different stress responses of gut isolates	
3.2.1. <i>Adaptive traits for temperature tolerance</i>	
3.2.2. <i>Adaptive traits in saline environment</i>	
3.2.3. <i>Adaptive traits in alkaline and acidic environment</i>	
3.2.4. <i>Antibiotic resistance of gut isolates</i>	
3.2.5. <i>Heavy metal resistance of gut isolates</i>	
3.3. CRISPR-Cas system	
3.4. Bacterial secretion systems	
4. Discussion	66-79
5. Conclusion	80
Chapter 3: Comparison of gut bacteria of <i>Lepidocephalichthys guntea</i> with <i>Cirrhinus mrigala</i> to reveal differences in the gut bacterial community during oxygen stressed environmental condition by Meta-taxonomic study	81-118
<hr/>	
1. Introduction	82-84
Subchapter 1	85-102
<hr/>	
1. Materials and methods	86-89
1.1. Maintenance of animal	
1.2. Experimentation	
1.3. Dissection of fish gut	
1.4. gDNA extraction and PCR amplification	
1.5. Library preparation and sequencing	
1.6. Bioinformatics Analysis	
2. Results	89-95
2.1. Sequence evaluation	
2.2. Community profiling	

2.2.1. <i>Alpha and Beta diversity</i>	
2.2.2. <i>Core microbiome analysis</i>	
2.3. Comparative analysis of gut microflora	
2.4. Correlation network analysis	
2.5. Functional prediction	
3. Discussion	95-101
3.1. Hypoxia-induced changes in anterior gut vs. posterior gut of <i>L. guntea</i>	
4. Conclusion	102
Subchapter 2	103-114
<hr/>	
1. Materials and methods	103-106
1.1. Maintenance of animal	
1.2. Experimentation	
1.3. Dissection of fish gut	
1.4. PCR amplification and amplicon sequencing	
1.5. Bioinformatics Analysis	
2. Results	106-111
2.1. Sequence evaluation	
2.2. Community profiling	
2.2.1. <i>Alpha and Beta diversity</i>	
2.2.2. <i>Core microbiome analysis</i>	
2.3. Comparative analysis of gut microflora	
2.4. Linear discriminant analysis effect size (LEfSe)	
2.5. Pattern search	
3. Discussion	111-114
4. Conclusion	114
Subchapter 3	115-118
<hr/>	
Chapter 4: To establish an infection model in order to study gut immunity in <i>Lepidocephalichthys guntea</i>	119-142
<hr/>	
1. Introduction	120-121
2. Materials and method	122-127
2.1. Collection and maintenance of fish	
2.2. Preparation of <i>A. hydrophila</i> for infection study	
2.3. Establishment of Infection model using <i>A. hydrophila</i>	

2.4. Sample preparation for final experiment and RNA isolation	
2.5. RNA sequencing	
2.6. Pre-processing of reads and de novo transcriptomic assembly	
2.7. Quality control and functional annotation	
2.8. Sample wise CDS identification, gene ontology and pathway analysis	
2.9. Differential expression analysis	
2.10. Protein network analysis	
3. Result	127-136
3.1. Progression of <i>A. hydrophila</i> infection in the gut of <i>L. guntea</i>	
3.2. Sequencing and functional annotation	
3.3. KEGG pathway analysis and detection of immune-responsive pathways	
3.4. Differential gene expression (DGE) analysis	
3.5. Activation of complement system	
3.6. Differential expression of other immunity-related genes	
3.7. Identification of heat shock proteins and their differential gene expression	
3.8. Comparative networking of proteins related to immunity and heat shock response	
4. Discussion	136-142
4.1. Innate immune response	
4.2. Crosstalk between innate and adaptive immunity	
4.3. Adaptive immune response	
4.4. Heat shock response	
4.5. Networking of gut immunity and heat shock response	
5. Conclusion	142
Bibliography	143-175
Supplementary files	176-183
Publication	184-214
