

Table of contents

List of figures	xv
List of tables	xx
1 Introduction	1
1.1 Compact Stars	1
1.2 Classification of Compact Objects	3
1.2.1 White Dwarf	3
1.2.2 Neutron Star	3
1.2.3 Strange Star	4
1.2.4 Black Hole	4
1.3 Objective	6
1.4 Methodology	7
1.4.1 General theory of relativity (GR) to study the physical features of Compact Objects	7
1.4.2 Anisotropic Star	8
1.4.3 Electromagnetic Field	10
1.4.4 Tolman-Oppenheimer- Volkoff (TOV) method	11
1.4.5 An Alternative Approach : Given Spacetime Geometry	13
1.5 Compact stars in Higher dimensions	14
1.6 Modified Theories of Gravity and Compact Stars	15
1.6.1 $f(R)$ Theory	15
1.6.2 $f(R, T)$ theory	16
1.6.3 $f(\mathbb{T})$ Theory	17
1.6.4 Higher order curvature theory	19
2 Compact Objects in GR with Anisotropy and Einstein's Maxwell field	22
2.1 Introduction	22

2.2	Einstein Maxwell Field equation in higher dimensions and Relativistic Solution	24
2.3	Physical Analysis of Compact Objects	27
2.3.1	Boundary Conditions	27
2.3.2	Variation of electric field and charged density in $D \geq 4$	28
2.3.3	Variation of Energy- Density and Radial pressure	29
2.3.4	Anisotropy in Pressure	30
2.3.5	Stability Study	31
2.3.6	Energy Conditions	34
2.3.7	Mass-Radius Relation	35
2.4	Variations of metric parameters with dimensions in charged star	37
2.5	Equation of State (EoS)	39
2.6	Discussion	40
3	Compact Stars in $f(\mathbb{T})$ gravity with anisotropy	44
3.1	Introduction	44
3.2	Anisotropic Compact Stars in $f(\mathbb{T})$ Gravity with Finch-Skea Geometry	45
3.3	Physical Analysis	48
3.3.1	Boundary Conditions	48
3.3.2	Density and Pressure of a compact object in $f(\mathbb{T})$ gravity	49
3.3.3	Pressure Anisotropy	51
3.3.4	Stability	53
3.3.5	Mass-Radius relation	53
3.3.6	Equation of State	55
3.4	Comparative study of Finch-Skea star in the $f(\mathbb{T})$ and GR theories	56
3.5	Anisotropic Finch-Skea stars with modified Chaplygin gas in $f(\mathbb{T})$ gravity	56
3.5.1	Physical Analysis of Stellar model with Chaplygin gas	57
3.5.2	Pressure Anisotropy	58
3.6	Discussion	59
4	Anisotropic Compact Objects in $f(R, T)$ modified gravity	64
4.1	Introduction	64
4.2	The field equations in $f(R, T)$ gravity	65
4.3	Modified Field Equations in $f(R, T)$ gravity	66
4.3.1	Exact Relativistic Solutions in $f(R, T)$ -gravity	68
4.4	Physical Properties of compact stars for $-1 < \alpha < 1$	70
4.4.1	Boundary Conditions	70
4.4.2	Density and Pressure of a compact objects in $f(R, T)$ gravity	71

4.4.3	Anisotropic Star	72
4.4.4	Stability of the Stellar Model:	73
4.4.5	Test of the different Energy conditions	76
4.4.6	Mass-Radius Relation	77
4.4.7	Stellar Models in $f(R, T)$ gravity and the EoS	78
4.4.8	Modified Tolman-Oppenheimer-Volkoff (TOV) equation	80
4.4.9	Compactification factor	81
4.5	Discussion	82
5	Strange Stars in Einstein Gauss-Bonnet Gravity with anisotropy	86
5.1	Introduction	86
5.2	Einstein-Gauss-Bonnet gravity (EGB) gravitational action and the field equation	88
5.3	Relativistic solutions in EGB gravity	89
5.4	Physical Analysis	90
5.4.1	Boundary condition in EGB gravity	90
5.4.2	Energy-density and Pressure	91
5.4.3	Analysis of Anisotropy in the Compact objects	91
5.4.4	Stability Analysis	92
5.4.5	Energy conditions	94
5.4.6	Tolman-Oppenheimer-Volkoff (TOV) equation	94
5.4.7	Mass-radius relationship	95
5.5	Stellar models in $D = 5$ and $D = 6$ dimensions	96
5.6	Discussion	98
6	Black Holes in Higher order curvature gravity and their shadows	102
6.1	Introduction	102
6.2	Higher order curvature gravity	104
6.3	Gravitational action and Motion of a test particle in Higher order curvature gravity	106
6.4	Black hole shadow in Higher order curvature gravity	109
6.5	Black hole shadows in presence of Plasma medium	112
6.5.1	Geodesics and BH shadows in Higher order curvature gravity	114
6.6	Energy emission rate	116
6.7	Conclusion	118
7	Summary and Future Prospective	120
7.1	Summary and Final Remarks	120
