CHAPTER I	
Review of Previous works	2
CHAPTER II	
Scope and Object of the present work	62
Summary of the present work	69
CHAPTER III	
Experimental Technique	76
CHAPTER IV	
Section A : Breakdown of gases by high frequency electric field in a transverse magnetic field (Pressure range 1 to 6 mm. of mercury)	93
Section B : Breakdown of gases by high frequency electric field in a transverse magnetic field (Pressure range .05 mm. to 1.5 mm. of mercury)	113
CHAPTER V	
Breakdown of gases by radio frequency electric field in the presence of a superimposed parallel d.c. electric field.	128

CHAPTER VI

Low pressure breakdown in gases in a uniform high frequency electric field (a) without magnetic field (b) with a steady transverse magnetic field.

146

CHAPTER VII

Effect of external magnetic field on the intensity of emission lines in the visible region of the spectrum from radiofrequency discharge column.
