PREFACE		1
CHAPTER 1	AN EVALUATION OF THEORETICAL CALCULATIONS	
1.1	Basic formulae, Notations, Units	2
1.2	Classical Williams - Weissäcker (WW) method	6
1.3	Treatments of Kessler and Kessler, Kessler	12
1.4	Treatments of DKMH	14
1.5	Treatments based on single virtual photon exchange through a vector meson, v n d model	15
	(a) Method of Drell and Walacka	17
	(b) Calculation of Sakurai	19
	(c) Calculation of Grossland & Fowler	22
1.6	Numerical calculation of cross sections	23
1.7	Discussion	55
CHAPTER 2	REANALYSIS OF THE PAST EXPERIMENTS ON MUON-NUCLEON INTERACTION	
2.1	Nuclear Emulsion experiments	63
2.1.1	Underground Cosmic ray muon experiments	63
2.1.2	Accelerator muon experiments	65

2.2	Multiplate Cloud Chamber Experiments	68
2.2.1	Underground experiments	68
2.2.2	Sea level multiplate Cloud Chamber and bubble chamber experiments	70
2.3	G.M. counter and scintillation counter experiments	73
2.3.1	Underground G.M. counter experiments of Aaldi et al, Argan et al, Higashi et al etc.	73
2.3.2	Underground G.M. counter experiments of Barret et al	73
2.3.3	Underground scintillation counter experiments of Krishnaswamy et al	73
2.3.4	Underground scintillation counter experiment of Barton and Parson	74
2.3.5	Experiments of Besrukov et al	76
2.4	Calorimeter experiments	76
2.4.1	Spark Chamber Calorimeter experiment of Allkofer et al	77
2.4.2	Ionisation Calorimeter experiment of Borog et al	77
2.4.3	Scintillation Calorimeter experiment of Chin et al	78
2.5	Summary of the experimental work	79
2.6	Procedure of re-analysis	80
2.6.1	Determination of underground muon spectrum	81

2.6.2	Sea level muon spectra at large zenith angles	82
2.6.3	Theoretical cross sections	83
2.7	Data interpretation	84
2.7.1	Total cross sections	84
2.7.2	Integral and differential distribution of square of four momentum transfer and energy transfer	92
2.8	Conclusion	96

CHAPTER 3 MULTIPLATE CLOUD CHAMBER EXPERIMENT ON INTERACTION OF COSMIC RAYS MUONS FROM THREE ZENITH ANGULAR DIRECTIONS IN THE ATMOSPHERE

3.1	Experimental set-up	98
3.2	Method of triggering and other operational details	99
3.3	Basic data	100
3.4	Features of shower events	102
3.5	Estimation of energy transfer	103
3.6	Analysis of the data	104
3.7	Analysis of air shower and parallel multiple muons	106
3.8	Results	113
3.9	Discussions	114

3.9.1	Possible uncertainties in measurements	114
3.9.2	Discussion of present measurements	115
CHAPTER 4		
4.1	Introduction	118
4.2	Apparatus for intensity measurements	119
4.3	Methods and measurements	125
4.4	Intensity measurements at large zenith angles	131
4.5	Comparisons with other data	134
4.5.1	Vertical intensities	134
4.5.2	Intensities at large zenith angles	138
	References	145
	Publications
