<u>CHAPTER-I</u>	Introduction	1-26
<u>CHAPTER-II</u>	Scope and object of the present investigation	27-30
<u>CHAPTER-III</u>	Experimental Procedure	31-36
<u>CHAPTER-IV</u>	Potentiometric, Spectroscopic and polarographic studies of humic and hymatomelanic acids from soil, peat and of model compounds.	37-50
SECTION-A		
	Potentiometric study	37-41
SECTION-B		
	Infra-red spectroscopic study	42-45
SECTION-C		
	Polarographic study	46-50
<u>CHAPTER-V</u>	Polarographic studies on the interaction of metal ions with humic substances.	51-142
SECTION-A		
	Studies on the interaction of Zn(II), Cd(II), Co(II), Cu(II) and Pb(II) ions with peat humic and hymatomelanic acids and determination of the stability constants of the corresponding complexes.	60-65

SECTION-B

Studies on the interaction of Zn(II), Cd(II), Co(II), Cu(II) and Pb(II) ions with soil humic and humatomelanic acids and determination of the stability constants of the corresponding complexes.

86-107

SECTION-C

Studies on the interaction of Zn(II), Cd(II), Co(II), Cu(II) and Pb(II) ions with synthetic model humic and humatomelanic acids and determination of the stability constants of the corresponding complexes.

108-128

CHAPTER-VI

Desorption of diquat and paraquat cations from the diquat²⁺ and paraquat²⁺ - humic acid complexes by different inorganic cations.

143-152

CHAPTER-VII

Summary and Conclusion

153-162

Bibliography

163-171
