## Contents

*Foreword*

*Preface*

*Acknowledgements*

- 1 The Study of Groundwater Level Fluctuations of Damodar River Basin, West Bengal, India** 1-15  
*Debapriya Poddar<sup>1</sup>, Sarbari Mukhopadhyay<sup>2</sup>, Tapash Mandal<sup>3</sup>, Jayanta Das<sup>4</sup> & Dr. Snehasish Saha<sup>5</sup>*
- 2 Delineation of Groundwater Potential Zones Using Analytic Hierarchy Process (AHP) Technique in Balason River Basin of West Bengal, India** 16-47  
*Saidur Rahaman<sup>1</sup>, Mantu Das<sup>2</sup> & Dr. Snehasish Saha<sup>3</sup>*
- 3 Assessment of Avifaunal and Floral Status of Fulbari Wetland** 48-55  
*Debarshi Bhattacharyya*
- 4 Changing Pattern of Land Use and Land Cover in Balason River Basin: A Spatio-Temporal Analysis** 56-70  
*Rajib Mitra<sup>1</sup>, Dipesh Roy<sup>1</sup> & Deepak Kumar Mandal<sup>2</sup>*
- 5 Analyzing the Complex Interaction of Active Tectonics and Basin Scale Geomorphology: A Case Study of Chel River Basin Using GIS Tool** 71-91  
*Dr. Debarshi Ghosh<sup>1</sup> & Dr. Snehasish Saha<sup>2</sup>*
- 6 A Study of Morphometric Evaluation of the Narangi River Basin, Chhattisgarh, India Using the Geospatial Approach** 92-104  
*Pooja Gupta<sup>1</sup>, Sanjay Tignath<sup>2</sup>, Dhananjay Kathal<sup>3</sup>, Divya Singh Lodhi<sup>4</sup>, Rajib Mitra<sup>5</sup>, and Jayanta Das<sup>6</sup>*

- 7 **Analysis of Spatio Temporal Changes of Groundwater Level in Gadadhar River Basin, West Bengal** 105-119  
*Satyajit Das<sup>1</sup> Debasish Roy<sup>2</sup> & Dr. Surjapada Paul<sup>3</sup>*
- 8 **Analysis of geomorphic indices of longitudinal river profile of Sanka River and its tributaries of Chhota Nagpur Plateau, India** 120-129  
*Dr. Baidurya Biswas<sup>1</sup> & Dr. Snehasish Saha<sup>2</sup>*
- 9 **Water Quality Assessment of the Mahananda River in Sub-Himalayan Foothills Regions of India** 130-151  
*Sujoy Kumar Malo<sup>1</sup> & Dr. Snehasish Saha<sup>2</sup>*

# Changing Pattern of Land Use and Land Cover in Balason River Basin: A Spatio-Temporal Analysis

Rajib Mitra<sup>1</sup>, Dipesh Roy<sup>1</sup> & Deepak Kumar Mandal<sup>2</sup>

## Abstract

*Land use and land cover (LULC) are significant aspect in determining how human impacts interact with the environment; hence it's crucial to predict changes. The empirical analysis revealed a considerable shift in LULC categorization in the Balason River Basin in the Darjeeling region of India. This study attempts to look into how LULC has changed over the past 30 years (1990-2020) in the Balason River Basin. The study area has seen a remarkable growth in population over the years, which has altered the environment of the area. The LULC classification was performed based on satellite imageries, and therefore, Landsat imageries were acquired from the USGS satellite image database from 1990-2020. The Maximum Likelihood Algorithm was chosen for supervised image classification in order to categorize the LULC. The current study has revealed that the amount of forest area, which was around 72.19 percent in 1990, decreased to 59.22 percent in 2005 and 54.53 percent in 2020. Water bodies and tea plantations also have experienced a rapid change in their area through time. Agricultural land and built up areas have remarkably increased from 13.06 to 22.05 percent and 5.15 to 13.72 percent, respectively. The findings highlighted the growing anthropogenic activities, influenced the recharge rates, surface runoff, and soil erosion incidences in the Balason basin. It was suggested that the basin's ecosystem be preserved by replanting the lost native trees. In addition, effective land use planning is necessary for the basin's sustainable management.*

**Keywords:** Land use and land cover (LULC); spatio-temporal change detection; Balason River Basin.
