A C K N O W L E D G E M E N T

In this thesis, I present the results of the research work carried out by me at the Department of Chemistry, University of North Bengal, Dt. Darjeeling, West Bengal, India.

I have carried on my investigation under the active supervision of Mr. B.Majee, M.Sc., Lecturer in Chemistry, University of North Bengal, who helped me in the selection of the problem and also in every phase of the work with his profound depth of knowledge and unabated zeal. It is he who originally awakened my interest in the field of Organotin Chemistry. I think, any expression would be inapt to pay back my debt to him.

Thanks are also due to the Librarian and the members of the staff, North Bengal University Library, who, not unoften, allowed themselves to be taxed even in busy hours for allowing me to consult various valuable journals, abstracts, books, etc.

I have a word of gratitude to the Principal, Karimganj College, Karimganj, Assam, for his kind cooperation.

(ii)

Above all, encouragement which I received from some of my colleagues in my hours of remorse and disappointment can not but be cheerfully remembered.

Department of Chemistry,
University of North Bengal,
July, 1973.
