GENERAL INTRODUCTION		1-21
<hr/>		
I.	Historical perspectives	1
II.	Definition of biofilm	2
III.	Biofilm mode of growth	2
IV.	Stages in biofilm development	3
V.	Protection from the environment	8
VI.	Nutrient capture and metabolic co-operativity in a biofilm	9
VII.	Horizontal gene transfer within biofilm	9
VIII.	The bacterium <i>Acinetobacter junii</i>	10
IX.	Objectives	11
X.	References	12
Chapter 1: Studies on Biofilm Formation by <i>A. junii</i> BB1A		22-50
<hr/>		
1.1	Introduction	22-25
1.2	Materials and method	26
1.2.1	Reagents and chemicals	26
1.2.2	Maintenance of bacterial strain	26
1.2.3	Inoculum preparation	26
1.2.4	Standardization of protocol for biofilm assay	26
1.2.4.1	Microtiter plate assay	26
1.2.4.2	Tube method	27
1.2.4.3	Congo Red Agar method	27
1.2.5	Determination of cell surface hydrophobicity	29
1.2.6	Influence of environmental factors on biofilm formation by <i>A. junii</i> BB1A	29
1.2.6.1	Influence of growth media	29
1.2.6.2	Influence of substrata	30
1.2.6.3	Influence of incubation temperature	30
1.2.6.4	Influence of carbon source	30
1.2.6.5	Influence of pH	30
1.2.6.6	Influence of ionic strength	30
1.2.6.7	Influence of static and dynamic condition	31
1.3	Results	32-37
1.4	Discussion	38-40
1.5	References	41-50

Chapter 2: Characterization of EPS Component of Biofilm 51-101

2.1	Introduction	51-59
2.2	Materials and methods	60
2.2.1	EPS extraction	60
2.2.2	Extraction of PNAG (poly- β -(1-6)- <i>N</i> -acetylglucosamine) and determination of <i>N</i> -acetylglucosamine	61
2.2.3	Time course of EPS production	62
2.2.4	Effect of pH and Temperature on EPS production	63
2.2.5	Effect of nutrients on EPS production	63
2.2.6	Physico-chemical analysis of EPS	64
2.1.6.1	Determination of chemical components of EPS	64
2.1.6.2	Purification and determination of molecular weight of EPS	70
2.1.6.3	Monosaccharide analysis of EPS	70
2.1.6.4	Glycosyl linkage analysis	71
2.1.6.5	Fourier-transform infrared (FT-IR) spectroscopy analysis	71
2.1.6.6	Thermogravimetric (TG) analysis and Differential scanning calorimetry (DSC) analysis	71
2.1.6.7	X-Ray diffraction analysis	72
2.1.6.8	Scanning electron microscopy of EPS and Energy dispersive X-ray spectroscopy	72
2.1.6.9	Rheological property, charge determination and solubility of EPS	72
2.3	Result	73-82
2.4	Discussion	83-86
2.5	References	87-101

Chapter 3: Physico-chemical Properties of Extracellular Polymeric Substances Produced by *A. junii* BB1A 102-129

3.1	Introduction	102-107
3.2	Materials and method	108
3.2.1	Determination of flocculating rate of EPS	108
3.2.1.1	Effects of EPS dosage, CaCl ₂ concentration, pH, temperature and metal ions on flocculating rate	108
3.1.1.2	Flocculation of activated charcoal powder	109
3.2.2.	Determination of emulsifying activity of EPS	109
3.2.3	Determination of metal binding properties of EPS by energy dispersive X-ray spectroscopy	110
3.3.	Result	111-117
3.4.	Discussion	118-121

3.5.	References	122-129
------	------------	---------

Chapter 4: Understanding Heavy Metal Resistance in *A. junii* BB1A 130-159

4.1	Introduction	130-133
4.2	Materials and method	134
4.2.1	Reagents, chemicals and biosensor strains	134
4.2.2	Effect of metals on cell growth	135
4.2.3	Determination of MIC for different heavy metals	135
4.2.4	Effect of metals on EPS production	136
4.2.5	Protein profile of EPS	137
4.2.6	Antibiotic susceptibility testing	139
4.2.7	Detection of plasmid	140
4.2.8	Detection of AHL based quorum sensing phenomena	140
4.2.9	Effect of Quorum sensing inhibitor; 4-NPO on metal toxicity	142
4.2.10	Demonstration of metal binding properties of EPS by Energy dispersive X-ray spectroscopy	142
4.3	Results	143-151
4.4	Discussion	152-153
4.5	References	154-159

Chapter 5: An Attempt to Identify Genetic Loci Responsible for Formation of Biofilm in *A. junii* BB1A 160-223

5.1	Introduction	160-168
5.2	Materials and Methods	169
5.2.1	Transposon mutagenesis	169
5.2.2	Application of Bioinformatics	176
5.2.2.1	Designing degenerate primer for <i>luxI</i> homologues	176
5.2.2.2	Amplification of <i>pgaC</i> homologue gene from <i>A. junii</i> BB1A	179
5.2.2.3	Structural and functional prediction of Pga protein in <i>A. junii</i>	180
5.2.2.4	Phylogenetic distribution of <i>pga</i> homologues	183
5.3	Results	184-211
5.4	Discussion	212-214
5.5	References	215-223
	GENERAL DISCUSSION & SUMMARY	224-231
	PUBLICATIONS	232-233
