INTRODUCTION	1
REVIEW OF LITERATURE	5
MATERIALS AND METHODS	45
(A) Plant Material	45
(i) Source of seeds	
(ii) Growth of Plants	
(B) Fungal culture	45
(1) Source of culture	
(ii) Completion of Koch's postulate	
(iii) Maintenance of stock culture	
(iv) Assessment of mycelial growth in liquid media.	
(C) Chemicals	48
(D) Preparation of inoculum and inoculation techniques.	49
(i) Sick Pot	
(ii) Water culture	
(E) The assessment of disease intensity	50
(F) Method of application of chemicals	51
(G) Method of extraction and separation of glyceollin from infected host roots.	51
(H) Ultraviolet spectrophotometry and quantification of glyceollin.	52
(I) Bioassays of glyceollin	53
(i) TLC-plate	
(ii) Petridish	
(iii) Slide germination	

(ii)

	<u>Page</u>
(J) Extraction to total soluble protein	54
(i) Root protein	
(ii) Mycelial protein	
(K) Protein estimation	55
(L) Polyacrylamide gel electrophoresis of soluble protein	55
(i) Preparation of gel solution and gel column.	
(ii) Electrophoresis	
(M) Source and maintenance of rabbits for serological works.	57
(N) Preparation of antigens	58
(i) Plant antigens	
(ii) Fungal antigens	
(O) Preparation of antisera	59
(i) Immunization	
(ii) Bleeding	
(P) Determination of titre value	60
(Q) Agar gel double diffusion	62
(R) Immunoelectrophoretic technique	62
(i) Preparation of agar slides	
(ii) Electrophoretic step	
(iii) Diffusion	
(iv) Washing, drying and staining of slides.	
(S) Indirect Enzyme linked Immunosorbent Assay (ELISA)	64
(T) Fluorescent antibody staining and microscopy	64
(i) <u>Fusarium graminearum</u> .	
(ii) Roots of <u>Glycine max</u> .	

EXPERIMENTAL

PART-I : Pathogenicity test of <u>Fusarium graminearum</u> on different soybean cultivars.	67
PART-II: Cultural conditions affecting growth of <u>F.graminearum</u> .	76
PART-III:Phytotoxic effect of metabolic by-products in the culture filtrate of <u>F.graminearum</u> on soybean plants.	82
PART-IV: Comparison of glyceollin contents of soybean cultivars after inoculation with <u>F.graminearum</u> .	86
PART-V : Experiments on the alteration of disease reaction by the application of various chemicals and their fungitoxic effect on <u>F.graminearum</u>	93
PART-VI :Comparison of glyceollin contents of soybean roots before and after alteration of disease reaction by chemical treatment.	122
PART-VII:Studies on the host-parasite protein	124
PART-VIII:Studies on the serological relationship between <u>F.graminearum</u> and soybean cultivars.	132
PART-IX : Detection of the cross-reactive antigen between <u>F.graminearum</u> and <u>G.max</u> by indirect enzyme linked immunosorbent assay.	146

	<u>Page</u>
PART-X : Analysis of antigenic pattern after chemical induction of resistance in soybean to <u>F.</u> <u>graminearum.</u>	151
PART-XI: The tissue and cellular location of CRA shared by soybean roots and <u>F.graminearum</u> .	154
DISCUSSION	160
