CHAPTER I: INTRODUCTION	1
1.1 Introductory notes	1
1.2 Definitions of the terms "Nutrition", "Under-nutrition" and "Malnutrition"	4
1.3. Nutritional situation in India	5
1.4. Methods of nutrition status assessment in human	10
1.4.1. Anthropometry	10
1.4.2. Biochemical assessment	12
1.4.3. Clinical examination	12
1.4.4. Dietary intake	13
1.4.5. Vital and health statistics	15
1.4.6. Ecological studies	15
1.5. Review of Published literature	15
1.5.1. Non-Indian Studies done on nutritional assessment using anthropometry	15
1.5.2. Indian Studies done in the assessment of nutritional status using anthropometry	18
1.5.2.1. Studies done on pre-school children using anthropometry	18
1.5.2.2. Studies done on children aged more than 5 years using anthropometry	19
1.5.2.3. Studies done on adolescents using anthropometry	20
1.5.2.4. Studies done on adult individuals using anthropometry	22
1.6.1. Non-Indian studies done on nutritional status utilizing dietary methods	25
1.6.2. Indian studies done on nutritional status utilizing dietary methods	26
1.6.2.1. Indian studies done on nutritional status utilizing dietary methods among children and adolescents	27
1.6.2.2. Indian studies done on nutritional status utilizing dietary methods among adults	28
1.7. Studies done in biological anthropology among the different populations of North	30

Bengal	
1.7.1. Studies done in the area of nutritional assessment among the different populations of North Bengal	31
1.8. Statement of the Problem	32
1.9. Objectives of the present study	33
CHAPTER II: MATERIAL AND METHOD	35
2.1 The population under study	35
2.1.1 The Rajbanshi	36
2.2 The study area	38
2.3. Method of sampling and sample size	39
2.4. Procedures of data collection	43
2.4.1. Demographic, socio-economic and life style factors	43
2.4.1.1 Demographic variables	44
2.4.1.2. Socio-economic variables	44
2.4.1.3. Lifestyle related variables	44
2.5. Nutritional assessment using anthropometric measurements	46
2.5.1 Anthropometric measurements recorded	46
2.5.1.1. Height	47
2.5.1.2. Weight	47
2.5.1.3. Mid-Upper Arm Circumference (MUAC)	47
2.5.1.4. Waist Circumference (WC)	47
2.5.1.5. Hip Circumference (HC)	48

2.5.1.6. Skinfold measurement	48
2.5.1.6.1. Biceps Skinfold (BSF)	48
2.5.1.6.2. Triceps Skinfold (TSF)	48
2.5.1.6.3. Sub-Scapular Skinfold (SSF)	48
2.5.1.6.4. Suprailiac Skinfold (SISF)	49
2.5.2. Technical errors of measurement	49
2.5.3. Assessment of nutritional status from the measurements recorded	49
2.5.3.1. Body Mass Index (BMI)	49
2.5.3.2. Rohrer Index (RI)	50
2.5.3.3. Waist-Hip Ratio (WHR)	50
2.5.3.4. Waist-Height Ratio (WHtR)	52
2.5.3.5 Conicity Index (CI)	52
2.5.3.6. Mid Upper Arm Circumference (MUAC)	52
2.5.4. Assessment of body composition	53
2.5.4.1. Upper Arm Composition	53
2.5.4.2. Body Density Assessment	53
2.5.4.3. Assessment of PBF	54
2.5.4.4. Assessment of Fat Mass (FM) and Fat Free Mass (FFM)	54
2.5.4.5. Assessment of Fat Mass Index (FMI) and Fat Free Mass Index (FFMI)	54
2.5.4.6. Assessment of Body Fat-Body Mass Ratio (PBF/BMI ratio)	55

2.5.4.7. Assessment of Body Fatness	55
2.5.4.8. Assessment of Related Risk Factor with PBF	55
2.5.4.9. Calculation of different skinfold equation for assessing body composition	55
2.6. Method of dietary intake assessment	58
2.6.1. 24-HR method	58
2.6.1.1. Precautions taken while using 24-HR Method	59
2.6.2. Quantitative estimation of the food stuffs consumed	60
2.6.3. Assessment of dietary intake	61
2.6.4. Assessment of Protein and Energy Adequacy Status	63
2.7. Statistical computation	64
CHAPTER-III: RESULTS	68
3.1. Demographic, Socio-economic and Life style related variables among the Rajbanshi individuals	68
3.1.1. Population size	68
3.1.2. Educational status	69
3.1.3. Occupational status	71
3.1.4. Monthly family income	72
3.1.5. Per capita income	73
3.1.6. Family size	73
3.1.7. Dependent children	75
3.1.8. Family type	76

1.3.9. Marital status	76
3.1.10. Drinking water facility	77
3.1.11. Toilet facilities	78
3.1.12. Landholding pattern	78
3.1.13. House pattern type	80
3.1.14. Socio-economic status	80
3.1.15. Likelihood ratio	82
3.1.16. Expenditure groups	83
3.2. Assessment of nutritional status using anthropometry and body composition characteristics	89
3.2.1. General descriptive statistics of age and the anthropometric variables	89
3.2.2. Age specific descriptive statistics of age and the anthropometric variables	90
3.2.3. Descriptive statistics of derived nutritional indices and body composition variables	92
3.2.4. Descriptive statistics of the skinfold indices and skinfold ratios	93
3.2.5. Effect of Age on nutritional status and body composition variables	96
3.2.6. Age and sex specific distribution of descriptive statistics of skinfold indices	97
3.2.7. Correlations between the anthropometric variables among the male Rajbanshi individuals	103
3.2.8. Correlations between the anthropometric variables among the female Rajbanshi individuals	104
3.2.9. Linear regression analysis of sex on the different anthropometric and body composition variables among the Rajbanshi individuals	104
3.2.10. Linear regression analysis of age on the different anthropometric and body composition variables among the Rajbanshi individuals	105
3.2.11. Linear regression analyses of BMI on the different anthropometric and body composition variables among the Rajbanshi individuals	120
3.2.12. Assessment of nutritional status among the Rajbanshi individuals using	129

BMI		
3.2.12.1.	Different grades of under-nutrition (CED) among the Rajbanshi individuals using BMI	131
3.2.12.2.	Age and sex specific prevalence in different grades of CED using BMI	132
3.2.13.	Assessment of nutritional status among the Rajbanshi individuals using MUAC	135
3.2.14.	Assessment of nutritional status among the Rajbanshi individuals using the combination of MUAC with BMI	136
3.2.15.	Prevalence of overweight, obesity and regional obesity among the Rajbanshi individuals	137
3.2.16.	Classification of the individuals based on BMI with WHR and WHtR	144
3.2.17.	Body fitness among the Rajbanshi individuals	147
3.2.18.	Age specific body fitness status based on PBF among the Rajbanshi individuals	147
3.2.19.	Assessment of risk factor associated with percent of body fat among Rajbanshi	150
3.2.20.	Age specific prevalence of risk factor associated with PBF	152
3.2.21.	Association of the socio-economic, demographic and lifestyle related variables with under-nutrition, regional adiposity among the Rajbanshi male individuals	154
3.2.21.1.	Association of the socio-economic, demographic and lifestyle related variables with BMI among the Rajbanshi male individuals	157
3.2.21.2.	Association of the socio-economic, demographic and lifestyle related variables with WHR among the Rajbanshi male individuals	157
3.2.21.3.	Association of the socio-economic, demographic and lifestyle related variables with WHtR among the Rajbanshi male individuals	158
3.2.22.	Association of the socio-economic, demographic and lifestyle related variables with under-nutrition, regional adiposity among the Rajbanshi female individuals (N= 416)	159
3.3.22.1	Association of the socio-economic, demographic and lifestyle related variables with BMI among the Rajbanshi female individuals	163
3.2.22.2.	Association of the socio-economic, demographic and lifestyle related	164

	variables with WHR among the Rajbanshi female individuals	
	3.2.22.3. Association of the socio-economic, demographic and lifestyle related variables with WHtR among the Rajbanshi female individuals	164
	3.2.23. Multinomial logistic regression model fitted on the socio-economic, demographic and lifestyle related variables among the male Rajbanshi individuals	166
	3.2.23.1. BMI vs. socio-economic, demographic and lifestyle related variables among the male Rajbanshi individuals	166
	3.2.23.2. WHR vs. socio-economic, demographic and lifestyle related variables among the male Rajbanshi individuals	167
	3.2.22.3. WHtR vs. socio-economic, demographic and lifestyle related variables among the male Rajbanshi individuals	172
	3.2.23. Multinomial logistic regression model fitted on the socio-economic, demographic and lifestyle related variables among the female Rajbanshi individuals	172
	3.2.23.1. BMI vs. socio-economic, demographic and lifestyle related variables among the female Rajbanshi individuals	173
	3.2.23.2. WHR vs. socio-economic, demographic and lifestyle related variables among the female Rajbanshi individuals	174
	3.2.23.3. WHtR vs. socio-economic, demographic and lifestyle related variables among the female Rajbanshi individuals	175
	3.3. Assessment of Nutritional status using dietary intake	179
	3.3.1. Food habit of the Rajbanshi population	179
	3.3.2. Consumption of energy and food stuffs among the Rajbanshi's	180
	3.3.3. Consumption of different nutrients among the Rajbanshi's	191
	3.3.4. Protein-caloric adequacy among the Rajbanshi individuals	201
	3.3.5. Multinomial logistic regression fitted on the socio-economic, demographic	203

and lifestyle variable among Rajbanshi individuals	
3.3.5.1. Protein and Caloric inadequacy vs. socio-economic, demographic and lifestyle related variable among Rajbanshi individuals	204
3.3.5.2. Protein-energy adequacy status and socio-economic and demographic variable	205
CHAPTER-IV: DISCUSSION	210
4.1. The comparative evaluation of socio-economic and demographic and life style related factors	210
4.2. Anthropometric assessment and Nutritional status among the Rajbanshi individuals	214
4.2.1. Anthropometric variables and the assessment of nutritional status and body composition	214
4.2.2. The Body Mass Index (BMI) and nutritional status	230
4.2.3. Chronic Energy Deficiency (CED) based on BMI	238
4.2.4. Different grades of CED	241
4.2.5. Mid-upper arm circumference (MUAC) and nutritional status	242
4.2.6. Prevalence of overweight and obesity	244
4.2.7. The assessment of regional adiposity	247
4.2.8. Percent of body fatness related to risk factors and body fitness assessed using percent of body fat	250
4.2.9. Effect of the socio-economic, demographic and lifestyle-related variables on nutritional status	252
4.2.10. Effect of socio-economic, demographic and lifestyle-related variables on overweight and obesity	259
4.3. Dietary intake assessment and Food and nutrient consumption among the Rajbanshi individuals	264

4.3.1. comparative evaluation of different food groups intakes among different indian populations	265
4.3.2. comparative evaluation of different nutrient among different indian populations	270
4.3.3. Gender related nutritional status, diet and nutrient consumption	274
4.3.4. Prevalence of Protein-caloric adequacy status	276
4.3.5. Effect of Socio-economic, demographic and life-style variables on the prevalence of protein and caloric inadequacy status.	277
CHAPTER-V: CONCLUSIONS AND RECOMMENDATIONS	279
5.1. Anthropometry and Nutritional status	280
5.2. Dietary intake, food habit and Nutritional status	283
5.3. Relation of socio-economic condition and demographic factors with nutritional status	285
5.4. Recommendation and proposed suggestive measures	285
5.5. General observation and Concluding remarks	287
