

CONTENTS

CHAPTER 1 : GENERAL INTRODUCTION

Liquid Crystals and their Classification	..	1
Liquid Crystals and Molecular Structure	..	9
Terminal Groups and Lateral Substituents	..	13
Theory of Nematic Liquid Crystalline State	..	15
Order Parameter	..	18
The Maier-Saupe Theory of Nematic	..	20
Extension of the Maier-Saupe Theory	..	26
Applications of Thermotropic Liquid Crystals	..	30
Alignment of Nematic Liquid Crystals	..	31
Electro-Optic Phenomena	..	33
Other Uses	..	38
Scope and Objective of the Work	..	39
References	..	40

CHAPTER 2 : INTRODUCTION TO X-RAY WORK

Samples and Their Purification	..	47
Apparatus	..	51
Conversion of Optical Density into X-ray Intensity	..	57
References	..	63

CHAPTER 3 : THEORETICAL BACKGROUND FOR X-RAY WORK

Introduction	..	64
Orientational Distribution Functions and Order Parameters		65

Pseudopotential	..	73
Molecular Parameters	..	76
Computer Programmes	..	80
References	..	87
CHAPTER 4 : RESULTS OF X-RAY WORK		
A) Samples BHeCP, BOCP, BDeCP	..	89
B) PAA	..	149
C) CBOOA	..	162
D) BPCPP	..	185
E) Cholesteryl Esters	..	212
References	..	215
CHAPTER 5 : DIELECTRIC STUDIES		
Introduction and Outline of Theoretical Background	..	218
Experimental	..	223
Experimental Data	..	232
Results and Discussions	..	237
References	..	240
CHAPTER 6 : SUMMARY AND CONCLUSION		
	..	241
