

# ACKNOWLEDGEMENT

The present work embodies the results of the research carried out by me at the Department of Chemistry, University of North Bengal, Darjeeling 734 013, India during 2005-2010.

I express my deepest gratitude to Professor Bijan Das for guiding me passionately in my work on polymer chemistry. More so, I would like to thank him for all the encouragement, effective guidance and the stimulating discussions over these years.

I sincerely thank the personnel at the laboratory of the department of chemistry not only for their cooperation but also for the positive and dynamic working atmosphere. I also express my thanks to my friends without whose technical assistance this thesis works would not have been completed.

Not least of all, I warmly thank my father, Keshab Dhoj Bhattarai and my mother, Sita Bhattarai for patience, understanding and active support they have shown on my study.

Lastly, I would like to give my heart felt special thanks to Raj Didi, Director of Brahma Kumaris Spiritual University, Kathmandu, Nepal and all Brahma Kumars and Brahma Kumaris for their cooperation and good wishes. My spiritual involvement in the Brahma Kumaris Institute have enthused me with unbounded motivation in my study and quest.
