Preface

Part - A

## CHAPTER 1

### General introduction and review of the previous works

1.1	Polarisation .....	1
1.2	Clausius Mossotti Equation.....	3
1.3	Debye Equation .....	3
1.4	Debye Equation for Polar-Nonpolar Liquid Mixture.....	4
1.5	Extrapolation Technique.....	6
1.6	Guggenheim Equation and Extrapolation Technique.....	7
1.7	Real and Imaginary Parts of a Dielectric Constant and Loss Tangent.....	12
1.8	Dielectric Loss and High Frequency Conductivity.....	13
1.9	Debye Equation and Conductivity Under High Frequency Electric Field .....	14
1.10	Dielectric Loss, Relaxation Time and the Distribution of Relaxation Time.....	16
1.11	Dielectric Relaxation in Dilute Solution of Polar Molecules in Nonpolar Solvent.....	23
1.12	Ultra High and Radio Frequency Conductivities, Relaxation Times and Dipole Moments of Polar Solutes in Nonpolar Solvents.....	25
1.13	Eyring's Rate Theory.....	26
	<b>References</b> .....	31

## CHAPTER 2

### Scope and objective of present work

2.1	Introduction .....	34
2.2	Estimation of $\tau$ from real part of high frequency conductivity.....	34
2.3	Eyring's rate theory .....	36
2.4	High frequency conductivity of polar-non-polar liquid mixture..	41
2.5	Double relaxation phenomenon .....	43
2.6	Dielectric relaxation in S.I. unit .....	52
2.7	Static Dipole moment $\mu_s$ in S.I. unit .....	53
2.8	Mesomeric and inductive moments .....	54
2.9	H F Dipolemoment $\mu_j$ in S.I. unit.....	54
2.10	Double relaxation phenomenon in S.I. unit .....	55

## **Part - B**

### **Experimental part**

2.11 Radio frequency measurement.....	57
2.12 Washing and cleaning of the Dielectric cell .....	60
2.13 Purification of Experimental liquids .....	60
2.14 Determination of coefficient of viscosity .....	60
References .....	61

## **CHAPTER 3**

<b>Dielectric Relaxation of some disubstituted Benzene and aniline derivatives under static and high frequency electric fields .....</b>	<b>63-79</b>
------------------------------------------------------------------------------------------------------------------------------------------	--------------

## **CHAPTER 4**

<b>High frequency and static relaxation parameters of some polar monosubstituted anilines in benzene .....</b>	<b>80-96</b>
----------------------------------------------------------------------------------------------------------------	--------------

## **CHAPTER 5**

<b>Single-frequency measurement of Double-Relaxation times of mono-substituted anilines in benzene.....</b>	<b>97-115</b>
-------------------------------------------------------------------------------------------------------------	---------------

## **CHAPTER 6**

<b>Dielectric Relaxation phenomena and high frequency conductivity of Rigid polar liquids in different solvents .....</b>	<b>116-135</b>
---------------------------------------------------------------------------------------------------------------------------	----------------

## **CHAPTER 7**

<b>Dielectric Relaxation of para-polar liquids under high frequency electric field.....</b>	<b>136-148</b>
---------------------------------------------------------------------------------------------	----------------

## **CHAPTER 8**

<b>Dipole moments of Associated binary solutes in benzene from ultra high frequency conductivities of solutions.....</b>	<b>149-163</b>
--------------------------------------------------------------------------------------------------------------------------	----------------

## **CHAPTER 9**

<b>Dielectric Behaviour and structural aspect of some polar liquids under radio frequency electric field at single and different temperatures .....</b>	<b>164-188</b>
---------------------------------------------------------------------------------------------------------------------------------------------------------	----------------

## **CHAPTER 10**

<b>Summary and Conclusion .....</b>	<b>189-195</b>
-------------------------------------	----------------

## **APPENDIX**

**List of published and Communicated Papers**
