

## Contents

	Page
<b>Part I</b>	
<b>Characterisation of Some Soils of the Eastern Himalayan Region</b>	
<b>Chapter 1</b> Review of the Previous Work	1
<b>Chapter 2</b> Scope and Object of the Present Investigation ..	4
<b>Chapter 3</b> Preparation of Samples	6
<b>Chapter 4</b> Physicochemical Characteristics of the Soils ..	11
<b>Chapter 5</b> Characterisation of the Humic Substances	25
<b>Section 1</b> Elemental Analysis	26
<b>Section 2</b> Visible Absorption Spectroscopy	29
<b>Section 3</b> Infrared Spectroscopy	33
<b>Section 4</b> Potentiometry	38
<b>Chapter 6</b> Soil Clay Mineralogy ..	46
<b>Summary</b> ..	54
<b>References</b> ..	58

## Part II

### An Attempt of Separation of Components of Artificial and Natural Clay Mixtures

<b>Chapter 1</b> Introduction and Review of Previous Work ..	64
<b>Chapter 2</b> Scope and Object of the Present Investigation ..	85

	Page
Chapter 3 Materials and Methods Used in the Present Investigation	89
Chapter 4 Base Exchange Capacities and Electrochemical Studies of Pure Hydrogen Clays, Alumina and Their Binary Mixtures ..	94
Chapter 5 Studies on the Viscometric and Swelling Characteristics of Pure Hydrogen Clays, Alumina and Their Binary Mixtures ..	108
Chapter 6 Adsorption of Large Alkyl-Quaternary Ammonium and Pyridinium Compounds by Clay Minerals ..	121
Chapter 7 Organic Derivatives of Bentonite, Kaolinite, Alumina and Their Binary Mixtures ..	129
Chapter 8 An Attempt of Separation of the Component Clay Minerals From Their Binary Mixtures ..	144
Chapter 9 Studies on the Soil Clays	156
Summary .. ..	160
References .. ..	167
Appendix .. ..	180
