

ACKNOWLEDGEMENT

Investigations embodied in this thesis entitled "Aryloxy-acetic acids : Potential ligands for monomeric organotin carboxylates", were initiated in May, 1983 in the department of Chemistry, North Bengal University under the encouraging supervision of Dr. T.K.Chattopadhyay, Reader of this department. A brief record of the objective and nature of this work has been presented in the "PREFACE".

The author has much pleasure in expressing his heartfelt gratitude to Dr. T.K.Chattopadhyay for his valuable guidance, advice and constant encouragement which have led to the successful completion of this investigation.

The author is very grateful to Prof. B.Majee, Department of Chemistry, North Bengal University, for his creative criticism and valuable suggestions on some of the problems encountered during the investigations.

The studies on biological properties of the organotin aryloxyacetates were carried out in the Department of Biochemistry, University of Calcutta. A special word of gratitude is due to Dr. A. Mandal and the Head of the department of Biochemistry for permission to use the laboratory. The author is indebted to Dr. (Mrs.) J. Chaudhuri, who assisted him in the studies of the biological properties.

The author expresses thanks to Prof. J. Holéček, Institute of Chemical Technology, Czechoslovakia, for recording the NMR spectra of some compounds as a part of a collaborative work with us.

The author would like to express his sincere gratitude to the Head of the Department of Chemistry, University of North Bengal for extending all facilities required for the work.

Thanks are also due to the Scientific Officer of this department for recording most of the IR spectra and to Mr. M. Chakraborty for transcribing this dissertation and also to Mr. L. Ghatowar for drawing some of the figures from the text skilfully and unflaggingly.

The author is thankful to all his colleagues in this laboratory whose help and sometimes their sense of humour made this strenuous work ~~so~~ pleasant. The author do most gratefully remember the inspiration and encouragement he derived from his respected parents and other members of his family and from his friends. No word would be enough to pay back their contributions for the success of the present research programme.

Finally, the author expresses his gratitude to the University of North Bengal for awarding Junior Research Fellowship during the tenure of this work.
