

CONTENTS

<u>Chapter</u>	<u>Page Number</u>
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	5
2.1. Starters	
2.1.1. Ragi	7
2.1.2. Bubod	9
2.1.3. Koji	9
2.1.4. Nuruk	10
2.1.5. Chiu-yueh	11
2.1.6. Chou or Chu	11
2.1.7. Loogpang	12
2.1.8. Bakhar	12
2.1.9. Marcha	13
2.1.10. Mana	13
2.2. Alcoholic beverages produced by starters	14
2.2.1. Tapé	14
2.2.2. Brem	15
2.2.3. Tapai	15
2.2.4. Tapuy	16
2.2.5. Lao-chao	17
2.2.6. Yakju and Takju	18
2.2.7. Ewhaju	18
2.2.8. Krachae or Nam-khaao	19
2.2.9. Khao-maak	19
2.2.10. Basi	19
2.2.11. Saké	20

2.2.12. Ruhi	21
2.2.13. Madhu	21
2.2.14. Pachwai	22
2.2.15. Millet beverage	22

3. MATERIALS AND METHODS

3.1. Culture Media	23
3.2. Reagents	26
3.3. Experimental	29
3.3.1. Collection of samples	29
3.3.2. Survey	29
3.3.3. Microbial analysis	31
3.3.3.1. Isolation of microorganisms	31
3.3.3.2. Characterisation of moulds	32
3.3.3.3. Characterisation of yeasts	32
3.3.3.3.1. Cell morphology	32
3.3.3.3.2. Pseudo-/True-mycelium	32
3.3.3.3.3. Characteristics of asci and ascospore	33
3.3.3.3.4. Reduction of nitrate	33
3.3.3.3.5. Growth at 37° C	33
3.3.3.3.6. Sugar fermentation	34
3.3.3.3.7. Sugar assimilation	34
3.3.3.4. Characterisation of bacteria	34
3.3.3.4.1. Gram staining	34
3.3.3.4.2. Cell morphology	35
3.3.3.4.3. Motility	35
3.3.3.4.4. Production of catalase	35
3.3.3.4.5. Gas production from glucose	36

3.3.3.4.6. Anaerobic growth	36
3.3.3.4.7. Hydrolysis of casein	36
3.3.3.4.8. Hydrolysis of gelatin	36
3.3.3.4.9. Hydrolysis of arginine	37
3.3.3.4.10. Hydrolysis of starch	37
3.3.3.4.11. Production of indole	37
3.3.3.4.12. Reduction of nitrate	38
3.3.3.4.13. Salt tolerance	38
3.3.3.4.14. Growth at different pH	38
3.3.3.4.15. Growth at different temperatures	38
3.3.3.4.16. Sugar fermentation	38
3.3.3.5. Identification	39
3.3.3.6. Preliminary screening of amylolytic activity	39
3.3.4. Physico-chemical analysis	40
3.3.4.1. pH	40
3.3.4.2. Temperature	40
3.3.4.3. Moisture	40
3.3.4.4. Titratable acidity	40
3.3.4.5. Ash	41
3.3.4.6. Alcohol	41
3.3.4.7. Reducing sugar	42
3.3.4.8. Total sugar	43
3.3.4.9. Nitrogen	44
3.3.4.10. Protein	45
3.3.4.11. Fat	45
3.3.4.12. Crude fibre	45
3.3.4.13. Carbohydrate	47
3.3.4.14. Minerals	47

3.3.4.15. Energy	48
3.3.5. Enzymatic activities	48
3.3.5.1. Enzymatic profiles	48
3.3.5.2. α -amylase activity assay	49
3.3.5.3. Glucoamylase activity assay	50
3.3.6. Microbial and physico-chemical changes during fermentation	50
3.3.7. Testing of isolates for producing kodo ko jaanr	51
3.3.7.1. Preparation of inocula	51
3.3.7.2. Sensory evaluation	52
3.3.8. Consumers' preference trial	54
3.3.9. Statistical analysis	54

4. RESULTS

4.1. Survey on fermented beverages	55
4.2. Marcha	57
4.2.1. Synonym of marcha	57
4.2.2. Traditional method of preparation	57
4.2.3. Socio-economy	58
4.2.4. Similar product	61
4.2.5. Microorganisms	61
4.2.5.1. Characterisation and identification of moulds	62
4.2.5.2. Characterisation and identification of yeasts	65
4.2.5.3. Characterisation and identification of bacteria	70
4.2.6. Composition of marcha	74
4.2.7. Enzymatic activities of isolates	75

4.3. Kodo ko jaanr	78
4.3.1. Synonym of kodo ko jaanr	78
4.3.2. Traditional method of preparation	78
4.3.3. Mode of consumption	80
4.3.4. Equipment used	81
4.3.5. Ethnical importance	82
4.3.6. Microorganisms	82
4.3.6.1. Characterisation and identification of yeasts	83
4.3.6.2. Characterisation and identification of bacteria	86
4.3.7. Proximate composition	90
4.3.8. Successional studies during kodo ko jaanr fermentation	92
4.3.8.1. Microbial changes	92
4.3.8.2. Physico-chemical and enzymatic changes	95
4.3.9. Testing of isolates for producing kodo ko jaanr	100
4.3.10. Consumers' preference trial	104
4.4. Bhaati jaanr	105
4.4.1. Synonym of bhaati jaanr	105
4.4.2. Traditional method of preparation	105
4.4.3. Mode of consumption	106
4.4.4. Similar product	107
4.4.5. Microorganisms	107
4.4.5.1. Characterisation and identification of yeasts	108
4.4.5.2. Characterisation and identification of bacteria	111

4.4.6. Proximate composition	114
4.4.7. Successional studies during bhaati jaanr	
fermentation	116
4.4.7.1. Microbial changes	116
4.3.7.2. Physico-chemical and	
enzymatic changes	119
4.5. Makai ko jaanr	124
4.5.1. Synonym of makai ko jaanr	124
4.5.2. Method of preparation	124
4.5.3. Mode of consumption	125
4.5.4. Microorganisms	126
4.5.4.1. Characterisation and identification	
of yeasts	127
4.5.4.2. Characterisation and identification	
of bacteria	129
4.5.5. Proximate composition	132
4.5.6. Successional studies during makai ko	
jaanr fermentation	134
4.5.6.1. Microbial changes	134
4.5.6.2. Physico-chemical and	
enzymatic changes	137
4.6. Gahoon ko jaanr	142
4.6.1. Microorganisms	143
4.6.1.1. Identification of yeasts and bacteria	144
4.6.2. Proximate composition	145
4.7. Raksi	148
4.7.1. Synonym of raksi	148
4.7.2. Method of preparation	148
4.7.3. Mode of consumption	149
4.7.4. Equipment used	150

4.7.5. Ethnical importance	150
4.7.6. Proximate composition	150
5. DISCUSSION	
5.1. Survey on fermented beverages	152
5.2. Ethnical importance	152
5.3. Marcha	153
5.4. Kodo ko jaanr	158
5.5. Bhaati jaanr	164
5.6. Makai ko jaanr	166
5.7. Gahoon ko jaanr	169
5.8. Raksi	170
6. SUMMARY	171
7. BIBLIOGRAPHY	178
