Item	Page Nos.
Declaration	i
Certificate	ii-iii
Acknowledgement	iv
Urkund report	v
Abstract	vi-x
Preface	xi
List of Tables	xii-xiv
List of Figures	xv-xvii
List of Appendices	xviii
Abbreviations	xix
1. Introduction	1-5
2. Literature Review	6-27
2.1: Pathogen (<i>Ralstonia solanacearum</i>)	7
2.1.1: Taxonomy of causal organism with remarks	8
2.1.2: Dissemination of <i>Ralstonia solanacearum</i>	9-10
2.1.3: Detection and Identification.	11-12
2.1.4: Conditions favourable for development of <i>Ralstonia solanacearum</i>	13
2.1.5: Distribution and host range of <i>Ralstonia solanacearum</i>	14
2.2: Diseases	15
2.2.1: Diseases caused by <i>R. solanacearum</i>	15
2.2.2: Fusarium Wilt.	16
2.3: Loss caused by <i>Ralstonia solanacearum</i>	17
2.4: Symptoms caused by <i>Ralstonia solanacearum</i> in tomato and allied crops	18
2.5: Virulence, pathogenesis and Fli C gene	19-21
2.6: Host Resistance	22
2.7: Disease control	22
2.7.1: Agronomic practices	23
2.7.2: Chemical control	24-25
2.7.3: Biological Control	26
3. Materials and Methods	28-57
3.1: Survey of different tomato growing fields of North Bengal, sample collection and selection of sample collection fields	29
3.2: Host plants	29

3.3: Plant germination and maintenance	30
3.4: Bacterial pathogens/antagonist	30
3.4.1: Isolation of pathogenic bacteria isolates from infected plants	30
3.4.2: Isolation of antagonistic bacteria from soil	32
3.5: Pathogenicity test	32
3.5.1: Pathogenicity test in potted plants and verification of Koch's postulations	32
3.5.2: Pathogenicity test in field grown whole plants and disease assesment in susceptible variety:	33
3.6: Morphological and Biochemical characterization of 26 bacterial isolates:	34
3.6.1: Gram staining:	34
3.6.2: Aerobic/anaerobic growth study:	36
3.6.3: Yellow Pigmentation study in YDC medium	36
3.6.4: Growth on D1M Medium	36
3.6.5: Oxidase test	37
3.6.6: Catalase test	37
3.6.7: Carbohydrate utilization test	38
3.6.8: Growth Below 4°C and above 40°C	38
3.6.9: Host range test of bacterial pathogen	38
3.7: Morphological study	39
3.7.1: Shape of the cells	39
3.7.2: Motility test	39
3.7.3: Light Microscopy	40
3.7.4: Scanning Electron Microscopy	40
3.8: Studies of bacterial genes for identification	40
3.8.1: DNA isolation	41
3.8.2: PCR technique	41
3.8.3: Detection of PCR amplicons in agarose gel	43
3.8.4: Gel electrophoresis	43
3.9: Cloning and sequencing of purified PCR product	43
3.9.1: Competent cell Preparation	44
3.9.2: Transformation	44
3.9.3: Purification and sequencing of PCR products	45
3.6.1.6.3. Transformation	46
3.9.4: Sequencing of the cloned insert	46
3.10: Phylogenetic analysis	46
3.11: Bacterial wilt disease management by indigenous isolated bacteria	47
3.11.1: Screening and Isolation of antagonistic bacteria	47
3.11.2: Biochemical characterization of bacterial antagonists	47
3.11.3: Molecular characterization of bacterial antagonist	47

3.11.3: In-vitro antagonism study	47
3.11.4: In-vivo antagonism study	48
3.11.4.1: Root disease assessment following antagonist application (By soil application)	48
3.11.4.2 Challenge inoculation by pathogenic bacteria followed by Bacterization of roots of tomato plants	49
3.12: In vitro control of <i>Ralstonia solanacearum</i>	49
3.12.1: In vitro control of <i>Ralstonia solanacearum</i> with <i>Trichoderma harzianum</i>	49
3.12.2: In vivo evaluation of <i>Trichoderma harzianum</i> for control of disease	50
3.13: Control of pathogenic bacteria by botanicals	50
3.14: Induction of Disease resistance	54
3.14.1: Application of inducer-chemicals on tomato plants and inoculation	54
3.14.2: Extraction and estimation of defense related enzymes	54
3.14.2.1: Phenylalanine ammonia lyase (PAL) (EC 4.3.1.5)	55
3.14.2.1: Peroxidase (POD) (EC 1.11.1.7)	55
3.14.2.2: Poly-phenol oxidase (PPO) (EC 1.14.18.1)	56
4. Results	59-115
4.1: Chapter-I: Bacterial wilt disease of tomato in fields of North Bengal and isolation of pathogen	60
4.1.1: Survey of bacterial wilt disease in North-Bengal	60
4.1.2: Bacterial wilt disease symptom	60
4.1.3: Isolation of <i>Ralstonia solanacearum</i> from infected plants	63
4.2: Chapter II: Pathogenicity of isolated bacterial isolates	66
4.3: Chapter- III: Characterization of isolated pathogens	72
4.3.1: Morphological characterization	72
4.3.2: Biochemical characterization of isolated pathogens.	78
4.3.3: Molecular characterization of bacterial isolates and identification	90
4.4: Chapter IV: Isolation and characterization of antagonistic bacteria from soil and application of antagonistic bacteria for wilt disease management	97
4.5: Chapter V: Management of bacterial wilts by application of antagonistic fungus <i>Trichoderma harzianum</i>	105
4.5.1: In vitro control of <i>Ralstonia solanacearum</i> with <i>Trichoderma harzianum</i> :	105

4.5.2: In vivo control of wilt caused by <i>R. solanacearum</i> by <i>T. harzianum</i> :	105
4.6: Chapter VI: Management of bacterial wilt by application of selected botanicals	107
4.6: Chapter VII: Induction of defense-related enzymes in tomato plants by abiotic inducers and studies on some defense related enzymes.	111
4.6.1: Activity of phenylalanine ammonia lyase on application of abiotic inducers	112
4.6.2: Activity of Peroxidase on application of abiotic inducers	114
4.6.3: Activity of Polyphenol oxidase (PPO) on application of abiotic inducers	115
5. Discussion	116-126
6. Bibliography	127-159
7.A. Appendix-1: Chemicals and Reagents	160
7.B. Appendix-2: Buffers and Solutions	162
7.C. Appendix-3: Growth media	165
7.D. Appendix-4: Sequences submitted in the GenBank	169
7.E. Appendix-5: List of publications	171
7.F. Appendix-6: Reprints	172
