<u>Chapter</u>	<u>Page Number</u>
INTRODUCTION	1
REVIEW OF LITERATURE	8
MATERIALS AND METHODS	
Media used	31
Reagents	33
Reference strains	34
Survey	35
Collection of samples	36
Microbiological analysis	37
Characterisation of bacterial isolates	38
Identification of bacteria	45
Characterisation of yeast isolates	45
Identification of yeasts	49
Pathogenic contaminants	49
Technological properties of isolates	52
Acidification and coagulation	52
Enzymatic profiles by API-zym	52
Antimicrobial and bacteriocin activity	53
Successional studies during <i>Selroti</i> batter fermentation	55
Preparation of <i>Selroti</i> batters at Laboratory	55
Microbial changes	56
Physico-chemical changes	56
Sensory evaluation	57

Testing of strain(s) for <i>Selroti</i> preparation	59
Starter cultures preparation	59
Sensory evaluation of <i>Selroti</i> prepared by starter culture	59
Consumers' preference trial	60
Physical and biochemical analysis	61
Statistical analysis	69

RESULTS

Survey of <i>Selroti</i>	70
Product characterisation	72
Synonym of <i>Selroti</i>	73
Traditional method of preparation	73
Equipment used	76
Mode of consumption	78
Socio-economy	79
Ethnical importance	79
Microbiological analysis	80
Microbial population	80
Grouping of representative LAB strains	82
Characteristics and identity of LAB	85
Grouping of representative yeast strains	90
Characteristics and identity of yeasts	92
Prevalence of LAB	95
Prevalence of yeast	98
Occurrence of bacterial contaminants	101
Effect of seasonal variation on microbial load	107
Technological properties	1

Effect of acidification and coagulation	106
Enzymatic profiles	110
Screening of bacteriocin activities	114
Proximate composition	117
Successional studies during fermentation	120
Microbiological changes during natural fermentation	120
Physico-chemical changes	123
Sensory properties of <i>Selroti</i>	125
Starter culture preparation	127
Sensory evaluation of <i>Selroti</i> prepared by starter culture	128
Consumers' preference trial	135
DISCUSSION	
Documentation of traditional knowledge	137
Microorganisms	140
Occurrence of bacterial contaminants	144
Effect of seasonal variation on microbial load	145
Technological properties of isolates	145
Proximate composition	149
Fermentation dynamics <i>in situ</i>	150
<i>Selroti</i> batter preparation by selected starter cultures	152
Conclusion	155
SUMMARY	157
BIBLIOGRAPHY	163
